

## Subject card

Subject name and code	Wireless Sensor Networks, PG_00064090							
Field of study	Electronics and Telecommunications							
Date of commencement of studies	February 2026		Academic year of realisation of subject			2026/2027		
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	2		Language of instruction		Polish			
Semester of study	3		ECTS credits		3.0			
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department Of Metrology And Optoelectronics -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej							
Name and surname	Subject supervisor	dr hab. inż. M	. inż. Marcin Gnyba					
of lecturer (lecturers)	Teachers dr hab. inż. Marcin Gnyba							
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	15.0	0.0	0.0	0.0		15.0	30
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	30		3.0		42.0		75
Subject objectives	Understanding the basis of the design, operation and control of telemetric distributed networks.							

Data wygenerowania: 22.04.2025 11:55 Strona 1 z 3

operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum [K7_U07] can apply advanced methods of process and function support, specific to the field of study study.    [K7_W04] knows and understands, to an increased extent, the principles, methods and techniques of programming and the principles of computer sof ware development or programming devices or controllers using microprocessors or other elements or programmable devices specific to the field of study, and organization of work of systems using computers or such devices [K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the professional engineering environment    Subject contents   Characteristics, fields of applications and requirements of TDS.   Characteristics, fields of applications and requirements of TSD, describes the stack of TCP/IP microservers.   (SU1) Assessment of knowledge (Swz) Assessment of knowledge (Swz) Assessment of knowledge (Swz) Assessment of task full file of Study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment   Contents   Co		Course outcome	Subject outcome	Method of verification		
methods of process and function support, specific to the field of study    ToP/IP microservers, characterizes the construction and functioning of TCP/IP microservers.		[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues -		knowledge [SW2] Assessment of knowledge		
distributed systems (TDS), characterizes applications and revehiciques of programming and the principles of computer software development or programming devices or controllers using microprocessors or other elements or programmable devices specific to the field of study, and organization of work of systems using computers or such devices    [K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment  Subject contents    distributed systems (TDS), characterizes applications and requirements of TSD, describes applications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment    Subject contents		methods of process and function support, specific to the field of study	of TSR, describes the stack of TCP/IP microservers, characterizes the construction and functioning of TCP/IP	fulfilment [SU5] Assessment of ability to		
required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment  1. Introduction, plan of the lecture, definition of the Telemetric Distributed Systems (TDS).  2. Characteristics, fields of applications and requirements for TDS.  3. Standards: IEEE 1451, IEEE 802.15, ZigBee.		understands, to an increased extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or other elements or programmable devices specific to the field of study, and organization of work of systems using	distributed systems (TDŚ), characterizes applications and requirements of TSD, describes	knowledge [SW2] Assessment of knowledge		
2. Characteristics, fields of applications and requirements for TDS. 3. 5. Components of TDS networks: coordinator with Ethernet gateway, coordinator with the router function function device, reduced function device.  6. Architecture of ending devices (nodes) of TDS networks (power, sensing, computing and communication subsystems).  7. TDS protocol stack for nodes (physical, data link, network, transport and application layers).  8. MAC layer of the TDS protocol stack.  9. Routing protocols in TDS networks (requirements, classifications, operation principles).  10. Approaches of the Middleware Layer for TDS nodes.  11. Application Layer controlling of sensors and preliminary processing of measurement data.  12. Parameters defining of QoS (Quality of Services) for TSR: throughput, reliability, security, mobility, latency, data accuracy in relation to energy usage.  13. Security in TSR networks. Robustness again passive and active attacks. Security in standards: IEEE 802.15.4 and ZigBee.  14. Construction of the coordinator with the Ethernet gateway.  15. Advantages of connection of TSR networks to Internet.  16. Minimal TCP/IP stack for microservers serving function of the coordinator with the Ethernet gateway.  17. Hardware realizations of TCP/IP microservers in TDS.  18. Specific of the Ethernet Layer in TCP/IP microservers.  19. Implementation of ARP and IP protocols in TCP/IP microservers.		<ol> <li>Characteristics, fields of applications and requirements for TDS.</li> <li>Standards: IEEE 1451, IEEE 802.15, ZigBee.</li> <li>Specifics of star, peer-to-peer, cluster-tree topologies for TDS networks.</li> <li>Components of TDS networks: coordinator with Ethernet gateway, coordinator with the router function, full function device, reduced function device.</li> <li>Architecture of ending devices (nodes) of TDS networks (power, sensing, computing and communication subsystems).</li> <li>TDS protocol stack for nodes (physical, data link, network, transport and application layers).</li> <li>MAC layer of the TDS protocol stack.</li> <li>Routing protocols in TDS networks (requirements, classifications, operation principles).</li> <li>Approaches of the Middleware Layer for TDS nodes.</li> <li>Application Layer controlling of sensors and preliminary processing of measurement data.</li> <li>Parameters defining of QoS (Quality of Services) for TSR: throughput, reliability, security, mobility, latency, data accuracy in relation to energy usage.</li> <li>Security in TSR networks.
