

## Subject card

Subject name and code	Channel Coding in Radio Communication Systems, PG_00064099								
Field of study	Electronics and Telecommunications								
Date of commencement of studies	February 2026		Academic year of realisation of subject			2026/2027			
Education level	second-cycle studies		Subject group			Optional subject group Specialty subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	2		Language of instruction			English			
Semester of study	3		ECTS credits			3.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Department Of Radiocommunication Systems And Networks -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej								
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Andrzej Marczak						
	Teachers		dr inż. Andrzej Marczak						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	15.0	0.0	0.0	15.0		0.0	30	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	30		6.0		39.0		75	
Subject objectives	The aim of the course is to familiarize students with the methods of channel coding.

RFZ_UD3  can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials's, following origineering environment (RFZ_UD3  can apply advanced methods, before apply advanced methods of process and function study and experience gained in the professional engineering environment (RFZ_UD3  knows and understands, so in increased extent, the construction and operating principles and contents and systems experience and understands, to an increased extent, the construction and perating principles and contents and systems are appropriate for the cumculum (RFZ_WD3  knows and understands, to an increased extent, the construction and understands, is an increased extent, the base increased extent, the extent increased extent the extent in the extent i	Learning outcomes	Course outcome	Subject outcome	Method of verification				
Imelificate of processes and function support, specific to the field of study   Imelificate   Imel		[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering	The student can perform simulation software	use methods and tools [SU1] Assessment of task				
understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum [K7_W10] knows and understands, to an increased extent, the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of study.  Subject contents  Application of cyclic codes in radiocommunication systems, as well as methods of supporting processes and functions, specific to the field of study.  Convolutional codies, fee Hamming distance. Soft and hard-coding additional complexity of the Viterbi algorithm. Computational complexity of the Viterbi algorithm. Computational complexity of the Viterbi algorithm and complexity of the Viterbi algorithm. May decoding algorithm. Systematic and unsystematic convolutional codes. The use of convolutional codes in radiocommunication systems. Interferency of code stings of convolutional codes in radiocommunication systems. Interferency of code stings of convolutional codes in radiocommunication systems. Turbocodes, work principle, correction abilities. Turbocodes in radiocommunication systems. Turbocode decoding, LDPC codes.  Prerequisites  Assessment methods and criteria  Subject passing criteria  Passing threshold  Percentage of the final grade project  50.0%  Subject passing criteria  Passing threshold  Percentage of the final grade project  50.0%  Sound  P. Sweeney ERROR CONTROL CODING From Theory to Practice, Wiley 2002.  Supplementary literature  Resources addresses  Adresy na platformie eNauczanie:  Viterbi's algorithm.		methods of process and function support, specific to the field of	knowledge regarding basic channel coding methods to understanding of operating methods					
understands, to an increased extent, the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of study    Application of cyclic codes in radiocommunication systems, examples of encoders and decoders. Convolutional coding, code description using generating functions and lattice graph. Correction ability of convolutional codes, free Hamming distance. Soft and hard-coding decoding of convolutional codes. The use of convolutional codes in radiocommunication systems, as well as methods algorithm. Computational complexity of the Viterbi algorithm. MAP decoding algorithm. Systematic and unsystematic convolutional codes. The use of convolutional codes in radiocommunication systems. Interleaving of code strings of convolutional codes. Excluding bits from convolutional code strings and their decoding, the impact of exclusion on correction capabilities. Turbocodes, owner principle, correction abilities. Turbocodes work principle. Turbocodes work principle, correction ability of convolutional codes. Free Hamming distance. Soft and hard-coding decoding of convolutional codes. Free Hamming di		understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues -	understands what role play individual blocks functional in					
Convolutional coding, code description using generating functions and lattice graph. Correction ability of convolutional codes, free Hamming distance. Soft and hard-coding decoding of convolutional codes. Viterbi's algorithm. Computational complexity of the Viterbi algorithm. MAP decoding algorithm. Systematic and unsystematic convolutional codes. The use of convolutional codes in radiocommunication systems. Interleaving of code strings of convolutional codes. Excluding bits from convolutional code strings and their decoding, the impact of exclusion on correction capabilities. Turbocodes, work principle, correction abilities. Turbocodes in radiocommunication systems. Turbocode decoding. LDPC codes. Decoding LDPC codes.  Prerequisites  Assessment methods and criteria  Subject passing criteria  Passing threshold  Percentage of the final grade project		understands, to an increased extent, the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of	used in channel coding and channel decoding and basic assessment methods quality
