

## Subject card

Subject name and code	Programmable Controllers (WEiA), PG_00042092							
Field of study	Power Engineering, Power Engineering							
Date of commencement of studies	October 2023		Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies		Subject group					
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	3		Language of instruction			English		
Semester of study	6		ECTS credits			4.0		
Learning profile	general academic profile		Assessment form			assessment		
Conducting unit	Department Of Power Electronics And Electrical Machines -> Faculty Of Electrical And Control Engineering > Wydziały Politechniki Gdańskiej							Engineering -
Name and surname	Subject supervisor	dr inż. Ireneusz Mosoń						
of lecturer (lecturers)	Teachers							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0		15.0	30
	E-learning hours inclu		P. L. C.	<b>.</b>		0 15 1		0.114
Learning activity and number of study hours	Learning activity	Participation in classes include plan		Participation i consultation h		Self-study		SUM
	Number of study hours	30		5.0		65.0		100
Subject objectives	Acquisition by students basic knowledge about programmable controllers - their structure, principle of operation, implementation in control systems - and the skil of programming programmable controllers.							
Learning outcomes	Course out	Subject outcome			Method of verification			
	[K6_W03] knows the basics of automation and automatic regulation, knows the principles of the selection of electrical devices, drive systems and their control		Student describes the role and functions that programmable controllers perform in automatic control systems, in particular in power engineering. Student selects programmable controllers for specific applications and knows how to design simple control systems with programmable controllers.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	formulate conclusions; has the ability to self-educate, interprets the results of completed engineering tasks, is able to design simple energy systems and their systems		Student analyses requirements of control tasks and creates control algorithms. Writes, debugs and tests programs of low and medium complexity for control of different control objects, in particular in power engineering. Creates user functions and function blocks. Creates simple visualisation applications.			[SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	[K6_W05] has structured knowledge in the field of electrical engineering and electronics, necessary to understand the basics of operation and selection of electrical machines, electricity transmission systems and power electronic devices		Student describes types and structures of programmable controllers. Explains principle of programmable controller operation and principle of execution of the user program.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_U12] can correctly choose tools (analytical or numerical) to solve engineering problems filtration processes, and data analysis; is able to use photogrammetric and remote sensing tools in engineering tasks in the field of geodetic techniques and metrology		Student chooses programming packages for programming and simulation of programmable controllers operation.			[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject

Types, structure and principle of operation. Execution of the user program. Process image memory. Hardware characteristics. Fundamentals of programming. International standard IEC 61131-3. Programming model. Programming languages. Data types and declaration of variables. Program organisation units: programs, functions and function blocks. Fundamentals of programming. Creation of user functions and function blocks. Structuring of user programs. Networking programmable controllers (network structures, communication interfaces and transmission media, methods of media access control). Communication protocols in fieldbuses. Industrial Ethernet; protocols in industrial Ethernet. Design of programmable controllers based control systems. Selection of a programmable controller depending on an application. Realization of human - machine interface (HMI). SEMINAR Basics of writting and debugging control programs with the use of program simulator (virtual controller) and creation of visualisation applications. Description of a control object (preference: from power engineering). Creation of the algorithm and control program with visualisation for the chosen object. Preparation of presentation of the completed task and/or current trends in industry automation.
