

Subject card

Subject name and code	Physics, PG_00058177						
Field of study	Green Technologies						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department Of Physics Of Electronic Phenomena -> Faculty Of Applied Physics And Mathematics -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jędrzej Szmytkowski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		10.0		80.0	135
Subject objectives	The aim is to demonstrate laws of physics						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_K02] is aware of the social role of a technical college graduate, take the reflections on the ethical, scientific and social aspects of the work performed, understands the need to promote, formulating and providing the public with information and opinions concerning the activities of the profession of engineer.		Student is prepared to be engineer		[SK5] Assessment of ability to solve problems that arise in practice		
	[K6_W01] has a basic knowledge from some branches of mathematics and physics useful for formulating and solving simple problems in the field of environmental technologies and modern analytical methods		Student knows physics and mathematics, which are used in environmental technologies.		[SW1] Assessment of factual knowledge		
	[K6_U05] can formulate and solve engineering tasks analytical methods, simulation as well as experimental, able to apply knowledge of basic physics and mathematics to analyze the results of experiments, is able to analyze and assess existing technical solutions		Student knows how to use law of physics in daily life		[SU3] Assessment of ability to use knowledge gained from the subject		

Subject contents	About physics. Physical quantities and their units. Elements of vector algebra. Kinematics of a particle: linear motion, circular motion, Newton's laws of motion. Dynamics of rigid body: the moment of inertia, principal axes, Steiner's law, torque and angular momentum, equation of rotational motion, gyroscopes and precession. Conserve laws in mechanics. Pressure in a Liquid at Rest. Pascal's Principle and Archimedes' Principle. Bernoulli's Law. Oscillations and mechanical waves. Simple, damped and driven vibrations. Mechanical resonance. Beats. Types of waves. The equation of motion for harmonic plane waves. Wave velocity. Examples of diffraction and interference of waves. Standing waves. Doppler effect. Sound intensity level. The following problems will be realized if we will have enough time: Temperature and Heat. Laws of Thermodynamics. Electric field. Coulomb's law. The intensity of the electric field. The electrical potential. The relationship between the intensity of the electric field and potential. An electric dipole and its behavior in an external electric field. Capacitance of the electric capacitor. Comparison of basic characteristics of the electric field and gravity. Magnetic field. Magnetic induction vector. The Lorentz force. Biot-Savart law. Electrodynamical force. The interaction of two straight linear wires carrying an electric current. Magnetic dipole and its behavior in an external magnetic field.		
Prerequisites and co-requisites	Mathematics and physics from lyceum		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tutorials: Written tests	50.0%	40.0%
	Lecture: Written exam	50.0%	60.0%
Recommended reading	Basic literature	1. D. Halliday, R. Resnick, J. Walker, Fundamentals of physics, Wiley 2008	
		2. W.S. Wolkensztejn, Problems in Physics, PWN 1974	
	Supplementary literature	1. J. Orear, Physics, Macmillan Publishing Co, 1979	
		2. W. Hajko, Physics in Examples, WNT 1967	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	1. Moment of inertia . Determination of the moments of inertia of molecules 2. The principle of conservation of angular momentum. 3. Examples of harmonic oscillators : simple and physical pendulum, the weight attached to a spring 4. Damped motion. During time t_1 the amplitude of vibrations decreased n_1 times. How many times will decrease the amplitude of vibrations in the time t_2 ? 5. Doppler effect. 6. Comparison of the basic features of the gravity and electrostatic fields 7. Comparison of the basic features of the electrostatic and magnetostatic fields 8. Electric dipole . Electric dipole moment . The behavior of the dipole in an external electric field. 9. Magnetic dipole. The magnetic dipole moment. The behavior of the dipole in an external magnetic field 10. The interaction between two straight parallel conductors carrying electric current . The definition of the ampere 11. Lorentz force. Definition of tesla. Motion of charge on a circular orbit in a uniform magnetic field. 12. Motion of charge in electric field ($mv^2 / 2 = eU$) . Definition of electronvolt 13. Capacitor and coil. Capacitance and inductance. Definition of farad and henry.		
Work placement	Not applicable		

Document generated electronically. Does not require a seal or signature.
