

Subject card

Subject name and code	Mathematics, PG_00064167									
Field of study	Transport									
Date of commencement of studies	October 2025	Academic year of realisation of subject		2025/2026						
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study	Subject group related to scientific research in the field of study				
Mode of study	Full-time studies		Mode of delivery		at the university					
Year of study	1	Language of instruction		Polish						
Semester of study	1	ECTS credits		7.0						
Learning profile	general academic profile		Assessment form		exam					
Conducting unit	Mathematics Center -> Vice-Rector For Education									
Name and surname of lecturer (lecturers)	Subject supervisor		dr Krzysztof Radziszewski							
	Teachers									
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar				
	Number of study hours	30.0	30.0	0.0	0.0	60				
E-learning hours included: 0.0										
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		SUM				
	Number of study hours	60		10.0		105.0				
175										
Subject objectives	Students obtain competence in the range of using methods of mathematical analysis and linear algebra and knowledge how to solve simple problems that can be found in the field of engineering.									
Learning outcomes	Course outcome		Subject outcome		Method of verification					
	[K6_W01] has knowledge of mathematical analysis, algebra, calculus of probability and operational research required for describing and solving transport problems		Student: defines the basic concepts of linear algebra, solves equations and inequalities, containing elementary functions geometrically interprets the results of an examination of a graph of a function using the concept of limit, continuity and derivatives of functions, recognizes the importance of selfexpanding knowledge and take the challenge of working with a group to solve a problem.		[SW1] Assessment of factual knowledge					
	[K6_U08] able to carry out simple engineering tasks related to the construction and operation of a selected element of the transport system, select the right methods and tools		Student: defines the basic concepts of linear algebra, solves equations and inequalities, containing elementary functions, geometrically interprets the results of an examination of a graph of a function using the concept of limit, continuity and derivatives of functions, recognizes the importance of selfexpanding knowledge and take the challenge of working with a group to solve a problem.		[SU1] Assessment of task fulfilment					

Subject contents	Matrices. Determinants. Inverse matrix. Rank of the matrix. Systems of linear equations: Cramers theorem, Kronecker-Capelly theorem, Gauss-Jordan elimination. Absolute value of a real number. Functions and their properties. Elementary functions: polynomials, rational functions, exponential functions, logarithmic functions, trigonometric and inverse trigonometric functions. Sequences of numbers. Limit of a sequence. Limit and continuity of a function. Differential calculus: derivative and differential of a function, Taylors formula, asymptotes of functions, maxima and minima, concavity and points of inflection. Antiderivative and the indefinite integral.				
Prerequisites and co-requisites					
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade		
	Written exam	50.0%	60.0%		
	Midterm colloquium	50.0%	40.0%
