GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Models in spatial development, PG_00065301		
Field of study	Spatial Development		
Date of commencement of studies	February 2026	Academic year of realisation of subject	2026/2027
Education level	second-cycle studies	Subject group	Obligatory subject group in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Urban Design and Regional Planning -> Faculty of Architecture -> Wydziały Politechniki Gdańskiej		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Robert Skrzypczyński	
	Teachers		

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	30.0	0.0	0.0	0.0	0.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	4.0	16.0	50

Subject objectives

To acquaint students with various types of models used in spatial management, methods of their creation and application.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_U02] analyzes and critically evaluates the existing spatial phenomena and solutions occurring in urbanized structures of different scales (in the district, city, region); indicates solutions to problem situations and determines the appropriate directions of spatial development, taking into account multiple conditions; prepares up elements of planning studies on spatial policy and development strategies of the city and the region	Student indicates the place and method of applying models in the process of urban planning and regional planning.	[SU3] Assessment of ability to use knowledge gained from the subject
[K7_U04] plans and carries out computer simulations; uses information and communication technologies in an advanced way; interprets the obtained results and draws conclusions on phenomena related to spatial development	Student chooses a quantitative model, appropriate to the conditions and tasks related to spatial management	[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools

<table>
<tr><td>Subject contents</td><td>1. The concept and types of models and their role.
2. Iconographic and descriptive (ideological, conceptual) models concerning cities historical and contemporary.
3. Models in urban, region and country planning - creation and application.
4. Models of tourism development.
5. Systemic views of cities and other social territorial systems.
6. Population models.
7. Partial and comprehensive quantitative models (mathematical and simulation models of cities): model classifications, Lowry model, models: gravity, flow, Land-Use Transportation Interactions (LUTI), cellular automata, Agent-Based Models, microsimulation models. The paradigm of Zipser spatial decisions, ORION.
8. Models of regional growth.
9. Spatial processes, selected theories of spatial management - model approaches.
10. City control models.
11. Application of models in scenarios.</td></tr>
<tr><td>Prerequisites and co-requisites</td><td></td></tr>
<tr><td>Assessment methods and criteria</td><td><table>
<tr><th>Subject passing criteria</th><th>Passing threshold</th><th>Percentage of the final grade</th></tr>
<tr><td>Colloquium (test)</td><td>50.0%</td><td>90.0%</td></tr>
<tr><td>Activity during lectures - tests (quizzes)</td><td>50.0%</td><td>10.0%</td></tr>
</table></td></tr>
