GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Methods of experiment design, PG_00064744					
Field of study	Power Engineering					
Date of commencement of studies	February 2026		Academic year of realisation of subject		2025/2026	
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study	
Mode of study	Full-time studies		Mode of delivery		at the university	
Year of study	1		Language of instruction		English	
Semester of study	1		ECTS credits		2.0	
Learning profile	general academic profile		Assessment form		assessment	
Conducting unit	Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology -> Wydziały Politechniki Gdańskiej					

Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Paweł Dąbrowski
	Teachers	

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	30	6.0	14.0	50

Subject objectives	The subject aims to familiarize students with experimental work, from planning the experiment to drawing conclusions based on them. In addition, the subject aims to familiarize students with the importance of measurement uncertainty in experimental research and to show good practices in their conducting. This subject will teach the student how to plan and run an experiment, and how to interpret the data and compare it with scientific theories, considering measurement uncertainty.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_K82] is equipped to participate actively in lectures, seminars and laboratory classes conducted in foreign language	hypothesizes in English about conducting experiments related to energy issues	[SK1] Assessment of group work skills [SK4] Assessment of communication skills, including language correctness [SK5] Assessment of ability to solve problems that arise in practice
	[K7_U81] is able to communicate with ease in foreign language at B2+ level of the Common European Framework of Reference for Languages (CEFR) in everyday life, in academic and professional environments	performs measurement uncertainty calculations based on the content of the tasks in English	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
	[K7_W81] has knowledge of complex grammatical structures and diverse lexical resources needed to communicate in foreign language in terms of general and specialist language related to field of study	explains the terms related to the methods of experiment design in English	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation
	[K7_W04] demonstrates knowledge encompassing selected issues in the field of advanced detailed knowledge, particularly in the scope of methods, techniques, tools, and algorithms specific to Power Engineering	plans an experiment involving thermal and flow issues, using experimental designs	[SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects

Subject contents	1. Basic concepts 2. Experiment in historical 3. Examples of simple experiments 4. Basics of experiment design 5. Input, output, control, dependent, and independent variables 6. Uncertainties and measurement errors 7. Statistical analysis of measurement data 8. Utilization of measurement data for calculations 9. Numerical methods as an experiment aiding tools 10. Good practices in designing and conducting experimental research 11. Designing and conducting an experiment - a case study
Prerequisites and co-requisites	The knowledge of basic mathematical concepts with particular emphasis on the concepts of mathematical statistics. Basic knowledge in the field of thermal-flow measurements. Knowledge of English at a level that allows active participation in lectures and tutorials.

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Tutorial - written test	60.0%	40.0%
Lecture - written test	60.0%	60.0%

eResources addresses		

Example issues/ example questions/ tasks being completed	1. Definitions: experiment, input variable, output variable, control variable, dependent variable, independent variable, repeatability, sensitivity 2. Indicate the differences (and provide an example) between: experiment and observation, hypothesis and theory, mechanistic and empirical model, types of experimental methods, measurement error and uncertainty, accuracy and precision of measurement, descriptive and inferential statistics 3. Measurement uncertainty calculations 4. Statistical analysis of experimental data 5. False positive results 6. Design an experiment to measure: the emissivity of the body, the heat conductivity of solid material, the heat conductivity of fluid 7. Influence of various factors on the results of the experiment
