GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Storage of energy, PG_00064763		
Field of study	Power Engineering		
Date of commencement of studies	February 2026	Academic year of realisation of subject	2026/2027
Education level	second-cycle studies	Subject group	Specialty subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering -> Wydziały Politechniki Gdańskiej		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Marcin Jaskólski	
	Teachers		

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	15.0	0.0	0.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	8.0	12.0	50

Subject objectives

The aim of the course is to familiarize students with energy storage technologies and methods of their application in balancing energy systems.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_U01] utilizes acquired analytical, simulation, and experimental methods, as well as mathematical models for analysis and evaluation of energy systems, machines and devices, transmission grids and internal installations	Conducts analysis of the energy storage system using analytical methods.	[SU1] Assessment of task fulfilment
[K7_K11] is aware of importance of professional acting, the need for critical verification of acquired knowledge and consulting experts opinion in case of facing difficulties with individual problem solving	Critically evaluates knowledge of energy storage for the purpose of completing a task.	[SK5] Assessment of ability to solve problems that arise in practice
[K7_W01] explains and describes, based on general knowledge in the field of scientific disciplines forming the theoretical foundations of Power Engineering, the structure, principles of operation and evironmental impact of energy systems, machines and devices, transmission grids and internal installations	Planning an energy storage installation for selected initial conditions.	[SW3] Assessment of knowledge contained in written work and projects

Subject contents

Lecture: The need to store energy. Technologies for storing energy. The structure and the use of energy storage systems in energy systems. Rules for the selection of energy storage devices for the purposes of production and consumption balancing. Technical and economic analysis of energy hybrid systems using energy storage.

Laboratory: Electrical energy storage modelling. Energy storage sizing for a selected facility.
