

。 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Modern district heating systems, PG_00064760								
Field of study	Power Engineering								
Date of commencement of studies	February 2026		Academic year of realisation of subject			2026/2027			
Education level	second-cycle studies		Subject group			Specialty subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	2		ECTS credits			2.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering -> Wydziały Politechniki Gdańskiej						> Wydziały		
Name and surname	Subject supervisor		dr inż. Tomasz Minkiewicz						
of lecturer (lecturers)	Teachers				-				
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Project S		Seminar	SUM	
of instruction	hours	15.0	0.0	0.0	0.0		15.0	30	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	n didactic ed in study	Participation in consultation hours		Self-study		SUM	
	Number of study hours	30		6.0				50	
Subject objectives	The aim of the course is to familiarize students with efficient and sustainable methods of district heat delivery and production.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K7_K11] is aware of importance of professional acting, the need for critical verification of acquired knowledge and consulting experts opinion in case of facing difficulties with individual problem solving		The student professionally develops and presents the chosen topic, demonstrating a critical approach to the analyzed information.			[SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness			
	[K7_U11] communicates and justifies opinions on specialized topics in a manner understandable to diverse audiences, including the use of modern techniques, including information technology		The student presents a multimedia presentation prepared independently.			[SU1] Assessment of task fulfilment			
	[K7_W01] explains and describes, based on general knowledge in the field of scientific disciplines forming the theoretical foundations of Power Engineering, the structure, principles of operation and evironmental impact of energy systems, machines and devices, transmission grids and internal installations		The student demonstrates knowledge of the development of heating systems in Poland and worldwide.			[SW1] Assessment of factual knowledge			
Subject contents	Current state of district heating in Poland. Requirements for the Polish district heating sector. Modern solutions applied in Polish district heating. Characteristics of successive generations of district heating systems. Modern and low-emission heat sources in district heating systems. Collaboration of renewable energy sources with district heating systems. Heat storage in Polish district heating systems.								
Prerequisites and co-requisites	Good knowledge of basic physics (basic laws of physics, physical quantities and their units and measures, mechanics, electrical engineering, thermodynamics, heat transfer). Knowledge of energy processes' properties: efficiency of single conversion, efficiency of conversion cycle and thermodinamic cycle efficiency. Basic knowledge of mathematics: algebra, geometry, trigonometry, differential and integral calculus.								

Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Seminar presentation	60.0%	40.0%				
	Colloquium based on the lecture	60.0%	60.0%

	eResources addresses						
Example issues/ example questions/ tasks being completed	Describe the stages of the evolution of district heating networks.						
	List at least three low-emission energy sources operating in a modern district heating system and characterize one of them.						
	Describe the type of cooperation between renewable energy sources and the district heating system.						
	List at least three methods of storing district heating energy and characterize one of them.						
Work placement	Not applicable						

Document generated electronically. Does not require a seal or signature.
