

Subject card

Subject name and code	Advanced engineering materials, PG_00064783						
Field of study	Mechatronics						
Date of commencement of studies	February 2026		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Division of Structural Materials Technology and Welding -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jerzy Łabanowski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	Obtaining basic knowledge of modern construction materials and their behavior in working environment in industry						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W12] identifies and interprets the main developmental trends and significant new achievements in the field of engineering and technical sciences and disciplines relevant to the course of study		The student knows the groups of modern construction materials; methods of shaping their properties and research methods necessary to assess durability.		[SW1] Assessment of factual knowledge		
	[K7_U15] evaluates the feasibility of advanced methods and tools for solving complex engineering tasks of a practical nature, characteristic of the field of study, and selects and applies appropriate methods and tools for this purpose		The student uses appropriate research methods and computational techniques to assess the durability and reliability of materials.		[SU4] Assessment of ability to use methods and tools		
	[K7_W04] demonstrates knowledge encompassing selected issues in the field of detailed knowledge, particularly in the scope of methods, techniques, tools, and algorithms specific to Mechatronics		Interprets differences in the properties of modern construction materials, explains the mechanisms of material degradation during use		[SW1] Assessment of factual knowledge		

Subject contents	LECTURE:Weldable structural steels of increased and high strength. Steels for the automotive industry. Stainless steels: ferritic, austenitic, ferritic-austenitic duplex and precipitation hardened. Passivation treatment of stainless steels to protect against corrosion. Causes of corrosion damage to austenitic steels in industrial installations. Low-alloy steels for operation at elevated temperatures. Creep; the effect of temperature, time and stress on the mechanical properties of alloys. Chilling-resistant steels and superalloys based on iron, nickel and cobalt, used in power engineering and for equipment in the petrochemical and chemical industries. Heat-resistant alloys; chemical composition, operating temperatures. High-melting metals; molybdenum, niobium, tungsten, zirconium, hafnium and their alloys. Materials with the structure of intermetallic phases. Heat-resistant light metal alloys. Materials resistant to abrasive wear.LABORATORY:1. Weldable structural steels of increased and high strength. Vickers hardness distribution in welded joints.2. Austenitic and duplex stainless steels. Analysis of operational damage cases.3. Low-alloy Cr-Mo steels for operation at elevated temperatures; assessment of the degree of degradation after long-term operation in creep conditions.4. Heat-resistant alloys (ferritic and austenitic) and creep-resistant alloys (austenitic and martensitic), assessment of the degree of degradation after long-term operation.5. Materials resistant to abrasive wear.		
Prerequisites and co-requisites	Knowledge of basic engineering materials at the first-cycle level in technical fields.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final colloquium - lecture	56.0%	60.0%
	passing all laboratory exercises	100.0%	40.0%

	eResources addresses		
Example issues/ example questions/ tasks being completed	Metallurgical weldability of steel, carbon equivalent. Application of weldable unalloyed steels. Steel strengthening mechanisms. Bainitic steels, alloying additions, CTP diagram, application. Austenitic stainless steels, role of chromium and nickel, basic heat treatment. Examples of modern steel grades for the automotive industry.		
Work placement	Not applicable
