

Subject card

Subject name and code	Modelling of robots and manipulators, PG_00064800						
Field of study	Mechatronics						
Date of commencement of studies	February 2026		Academic year of realisation of subject		2026/2027		
Education level	second-cycle studies		Subject group		Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology -> Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Michał Mazur				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	Expanding knowledge about modeling of robots and manipulators. The perception of robots as a mechatronic system. Some specific issues relating to the actors, sensors and control systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U02] formulates and tests hypotheses concerning problems of stationary and non-stationary mechatronic systems/processes, as well as simple research problems		Students have knowledge about development trends and the most important new achievements in the field of robots.		[SU3] Assessment of ability to use knowledge gained from the subject [SU5] Assessment of ability to present the results of task		
	[K7_W02] demonstrates structured and theory supported knowledge encompassing key issues in the field of Mechatronics, enabling modeling and analysis of stationary and non-stationary mechatronic systems, devices, and processes with continuous and discrete operation		Students understand the necessity of using discrete modeling techniques for robot design and operation.		[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation		
	[K7_U13] evaluates the feasibility and potential for utilizing new technical and technological achievements in accomplishing tasks characteristic for the field of study		Students know the available virtual prototyping tools used to design robots.		[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools		
	[K7_W04] demonstrates knowledge encompassing selected issues in the field of detailed knowledge, particularly in the scope of methods, techniques, tools, and algorithms specific to Mechatronics		Students have theoretically knowledge related to the issues of mechatronic design and mechatronic systems in the field of robots.		[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	LECTURE: 1 Introduction 2 Modern trends in the development of two industrial robots 3 Sensors 4 SignalConditioning 5 Tactile and haptic sensors 6 Methods of localization of mobile robots 7 Effectors 8 Elementsof power supply systems 9 Drive chain elements used in robots 10 Tools for robot programming andsimulation Laboratory: 1 Programming the tasks of a delta robot on the example of ABB IRB360, working with a beltfeeder 2 Programming the tasks of the HC3a collaborative robot using the OnRobot vision system 3Programming the movement of an industrial robot with coupling from a force sensor on the example of theNachi NC04 robot 4. kinematics and dynamics of manipulator movements using the RobotAnalyzer program5. Development of the manipulator's movement path for the implementation of a specific movement task in asimulation using the Nachi MZ04 manipulator available in the RoboDK 6 libraries. Operating the Nachi NC04robot and programming its movement trajectories using the robot controller 7. Preparing the manipulator'smovement path for the purpose of implementing a specific movement task of the ABB IRB360 robot usingthe RobotStudio program and a robot controller. 8. Operating the HCR-3a robot and preparing themanipulator's movement path for the purpose of implementing a specific robot movement task using directlearning		
Prerequisites and co-requisites	Knowledge and experience in Industrial Robots and Manipulators (I-st level). Knowledge and experience inInformatics (I-st level). Knowledge and experience in Mechatronic design (I-st level).		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Colloquium	50.0%	60.0%
	Team projects	50.0%	40.0%
