| Learning outcomes | Course outcome   | Subject outcome   | Method of verification   |
|-------------------|--|---|--|
|                   | [K7_U13] evaluates the feasibility<br>and potential for utilizing new<br>technical and technological<br>achievements in accomplishing<br>tasks characteristic for the field of<br>study  | Gaining knowledge about ship equipment.                       | [SU1] Assessment of task fulfilment                                  |
|                   | [K7_U02] formulates and tests<br>hypotheses concerning problems<br>related to shipborne and offshore<br>systems/processes, as well as<br>simple research problems  | Acquiring knowledge and skills in designing ship equipment.   | [SU3] Assessment of ability to use knowledge gained from the subject |
|                   | [K7_U01] applies acquired analytical, simulation, and experimental methods, as well as mathematical models for analysis and evaluation of shipborne and offshore systems and processes   | Gaining knowledge regarding the ship's equipment.             | [SU3] Assessment of ability to use knowledge gained from the subject |
|                   | [K7_W04] demonstrates<br>knowledge encompassing<br>selected issues in the field of<br>advanced knowledge, particularly<br>in the scope of methods,<br>techniques, tools, and algorithms<br>specific to Naval Architecture and<br>Ocean Engineering   | Gaining knowledge about ship equipment.                       | [SW1] Assessment of factual knowledge                                |
|                   | [K7_W01] explains and describes, based on general knowledge in the field of scientific disciplines forming the theoretical foundations of Naval Architecture and Ocean Engineering, the construction and principles of operation of marine systems, processes and their components, as well as methods and means of their design and operation | Gaining knowledge about ship equipment.                       | [SW1] Assessment of factual knowledge                                |
|                   | [K7_U04] creatively designs or<br>modifies, either entirely or in part,<br>a shipborne or offshore system or<br>process according to a given<br>specification, considering both<br>technical and non-technical<br>aspects, estimating costs and<br>adopting design techniques<br>representative for the field                                  | The student has the skills to design selected ship equipment. | [SU1] Assessment of task fulfilment                                  |
