

Subject card

Subject name and code	Statistical analysis in production management, PG_00064718						
Field of study	Management and Production Engineering						
Date of commencement of studies	February 2026		Academic year of realisation of subject			2025/2026	
Education level	second-cycle studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies		Mode of delivery			at the university	
Year of study	1		Language of instruction			Polish	
Semester of study	1		ECTS credits			3.0	
Learning profile	general academic profile		Assessment form			assessment	
Conducting unit	Faculty of Mechanical Engineering and Ship Technology -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Dariusz Fydrych				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		7.0		23.0	75
Subject objectives	The aim of the course is to familiarize students with statistical techniques used in production management.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_K11] is aware of importance of professional acting, the need for critical verification of acquired knowledge and consulting experts opinion in case of facing difficulties with individual problem solving	The student is active in acquiring knowledge	[SK2] Assessment of progress of work
	[K7_W02] demonstrates structured and theoretically based knowledge covering key issues in the field of Management and Production Engineering allowing for modeling and analysis of stationary and non-stationary production processes and systems, devices and technological processes with continuous and discrete operation	The student is able to use statistical techniques	[SW1] Assessment of factual knowledge
	[K7_U04] creatively designs or modifies, in whole or at least in part, production and technological systems and processes, in accordance with the given specifications, taking into account technical and non-technical aspects, estimating costs and using known design techniques appropriate for tasks in the field of Management and Production Engineering	The student is able to acquire and use multidisciplinary knowledge.	[SU1] Assessment of task fulfilment
	[K7_U13] evaluates the feasibility and potential for utilizing new technical and technological achievements in accomplishing tasks characteristic for the field of study	Student classifies production processes	[SU1] Assessment of task fulfilment
Subject contents	<p>Lecture: Basic concepts of statistics. Statistical model. Data mining. Taxonomy. Statistical analysis as a production optimization tool. The role of statistical methods in production engineering. Statistical software: Statistica, R, SPSS, Statgraphics, MS Excel. Principles of data preparation for statistical analyses. Basic statistics: measures of position and spread. Regression analysis: simple regression, multiple regression, factorial regression, polynomial regression, response surface regression. Logistic regression. Dimension reduction methods. Correspondence analysis. Factor analysis. Principal component analysis. Cluster analysis. Classification trees. Industrial statistics: experiment planning. Graphical methods of presenting multidimensional data: star plots, Chernoff faces, matrix plots, frame-whisker plots. Case study: machining, welding, other manufacturing processes</p> <p>Project: Development of a solution to a given multidimensional problem in the field of basic manufacturing techniques. Laboratory: Getting acquainted with the use of statistical programs (e.g. Statistica). Preparation of data for analysis. Task solution: Verification of the fit of the data to the normal distribution: the Shapiro-Wilk test. Simple regression. Multiple regression. Cluster analysis. Correspondence analysis. Linear ordering</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Test	60.0%	60.0%
	Laboratory	60.0%	20.0%
	Project	60.0%	20.0%
