

Subject card

Subject name and code	, PG_00069680						
Field of study	Strefa przybrzeżna - projekt dyplomowy I						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish Polish		
Semester of study	2		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Urban Design and Regional Planning -> Faculty of Architecture -> Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. arch. Justyna Bręś				
	Teachers		dr inż. arch. Justyna Bręś				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	15.0	0.0	30.0	0.0	45
	E-learning hours included: 0.0						
	eNauczanie source addresses: Moodle ID: 46817 Projekt dyplomowy I - seminarium ZZOP 25/26 (Bręś) https://enauczanie.pg.edu.pl/moodle/course/view.php?id=46817						
	Additional information: Zajęcia odbywają się stacjonarnie w formie ćwiczeń oraz zajęć projektowych na sali. Materiały do zajęć zostaną udostępnione na platformie eNauczanie po utworzeniu kursu na dany semestr.						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		0.0		0.0	45
Subject objectives	The aim of the course is to familiarize students with the methods and tools used in spatial planning in the process of shaping the coastal zone, i.e., the coastal belt and internal marine waters. Architecture graduates, who are legally authorized to prepare spatial planning documents, should acquire the knowledge and skills necessary to understand planning documents concerning both the land and marine areas, which constitute the territory of many coastal municipalities.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U07] is able to direct the process of self-education in the field of urban planning, spatial planning and related fields; obtains information from literature and other appropriately selected sources, interprets and critically evaluates them; formulates and extensively justifies his/her opinion and on this basis is able to prepare a short scientific paper; is able to inspire and organize the learning process of others	Students will be familiar with the essential legal sources for coastal spatial planning. They will have a basic understanding of legislative techniques to enable them to understand and interpret spatial planning documents. They will also be able to analyze and critically interpret local spatial development plans, maritime spatial development plans, and other documents directly relevant to the coastal zone. As a result, students will be able to prepare a short analytical paper presenting the conclusions of their planning and spatial analyses.	[SU3] Ocena umiejętności wykorzystania wiedzy uzyskanej w ramach przedmiotu [SU1] Ocena realizacji zadania
	[K7_W04] has in-depth knowledge of issues and technical systems related to the planning, design and implementation of infrastructure projects and urban planning, as well as the life cycle of facilities and systems related to the operation of settlement units	Knows and understands the legal acts shaping the spatial planning system, in particular in the area of contact between the coastal strip and internal sea waters in Poland, and understands the relationships between these acts.	[SW3] Ocena wiedzy zawartej w opracowaniu tekstowym i projektowym
	[K7_W06] knows and understands the concepts and principles of copyright protection and the need to manage intellectual property resources	Knows and complies with the rules of copyright protection and complies with the above when preparing a short scientific paper.	[SW3] Ocena wiedzy zawartej w opracowaniu tekstowym i projektowym
	[K7_U02] analyzes and critically evaluates the existing spatial phenomena and solutions occurring in urbanized structures of different scales (in the district, city, region); indicates solutions to problem situations and determines the appropriate directions of spatial development, taking into account multiple conditions; prepares up elements of planning studies on spatial policy and development strategies of the city and the region	Based on the analyses conducted, he is able to propose creative solutions to identified spatial and planning problems.	[SU5] Ocena umiejętności zaprezentowania wyników realizacji zadania
	[K7_U04] plans and carries out computer simulations; uses information and communication technologies in an advanced way; interprets the obtained results and draws conclusions on phenomena related to spatial development	Is able to develop maps at an appropriate scale, illustrating the presented spatial and planning analyses using computer technology and GIS software.	[SU1] Ocena realizacji zadania [SU5] Ocena umiejętności zaprezentowania wyników realizacji zadania
	[K7_K03] responsibly fulfills his/her professional role as an urban planner and planner in a way that takes into account the changing social, economic, natural and legal conditions; develops his/her scientific and design achievements guided by the principles of professional ethics	Understands the legal acts that he or she will use as a future urban designer and is able to discuss the provisions of planning documents in a small team.	[SK1] Ocena umiejętności pracy w grupie [SK4] Ocena umiejętności komunikacji, w tym poprawności językowej
Subject contents	Basic concepts related to coastal spatial planning (space, environment, documents, stakeholders). Functions of land and water areas in the coastal zone of port cities. Characteristics of the planning system at the land-sea interface. Coordination of spatial and planning activities in port cities. Spatial analysis of a selected section of the coastal zone in a selected port city. Planning analysis of the coastal zone in a selected port city. Discussion of conclusions and possible directions for spatial planning in the coastal zone.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Seminars	50.0%	70.0%
	Design studio	50.0%	30.0%

	eResources addresses	
Example issues/ example questions/ tasks being completed	A sample assignment involves developing a comparative analysis of the provisions of applicable planning documents for a selected area of a port city. The analytical study consists of: - an introduction and a description of the study's purpose, - a map at an appropriate scale, divided into functional and spatial zones at the sea-land interface for the selected area, - a description of the identified space types, - a diagram indicating the functions established in the land and maritime plans for the selected area, along with the designation of public spaces at the sea-land interface, - a tabular summary of planning arrangements for the identified public spaces at the sea-land interface for the selected area, - a description of potential problematic aspects regarding planning coordination in the selected area, resulting from the comparison of land and water planning arrangements, - conclusions regarding potential solutions.
