

Subject card

Subject name and code	High Voltage Engineering, PG_00049616						
Field of study	INŻYNIERIA WYSOKICH NAPIĘĆ						
Date of commencement of studies	February 2026	Academic year of realisation of subject				2025/2026	
Education level	second-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	1	ECTS credits				2.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering -> Wydział Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Marek Olesz					
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	6.0		14.0	50	
Subject objectives	Understanding the principles of selection and design of high voltage insulation for use in power system						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_U03] is able to obtain information from literature, databases and other sources, also in English, draw conclusions, formulate and fully justify opinions. substantiate opinions; is able to identify directions for further learning and implement the process of self-education	- accepts the need to obtain knowledge from various sources, also in English, in order to select measuring equipment and standardization guidelines			[SU2] Ocena umiejętności analizy informacji		
	[K7_K02] is aware of the impact of engineering activities on the environment, understands the non-technical effects of those activities	- performs measurements confirming the electrical strength of the insulation system, - detects ageing processes in insulation using appropriate measurements			[SK5] Ocena umiejętności rozwiązywania problemów występujących w praktyce		
	[K7_W03] has an extended and deepened knowledge of the field related to electrical power systems and electrical equipment	- analyzes electrical field distributions in insulation systems, - offers diagnostic tests of power equipment and installations			[SW1] Ocena wiedzy faktograficznej		
Subject contents	Course content – lecture Lecture: Analysis of electric field distributions in the vicinity of HV transmission lines - methods of analysis in field programs of the finite element method. Polluted flashover mechanism and structure of insulators. Designing of supporting and bushing systems. Construction of power cable - types of cables and methods of their laying. Designing power cable lines. Degradation processes and indicators for a state evaluation of insulation systems, forecasting life time of an insulation. Types of exposures of insulation systems in operation conditions. Diagnostics and monitoring of high voltage insulation in a power system. Laboratory: Insulation resistance indicators. Analysis of partial discharges in model systems. Gliding spark test. Testing of overvoltages in the transformer winding. Currents induced in cable conductors. Measurements of the dielectric loss factor with a high-voltage Schering bridge.						
Prerequisites and co-requisites	Credit a subject "High voltage engineering"						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	60.0%	60.0%
	Laboratory exercise	60.0%	40.0%
Recommended reading	Basic literature	1. H. Boryń, M. Olesz, S. Wojtas, Laboratorium TWN II, Skrypt specjalistyczny w wersji elektronicznej, WEiA PG, 2002 2. Mościcka H. (red.): Inżynieria wysokich napięć w elektroenergetyce, Wyd. Pol. Pozn. Tom 1 1996, Tom 2 1999	
	Supplementary literature	1. Flisowski Z. Technika wysokich napięć, WNT, Warszawa, 1988 2. Kosztaluk R. I inni: Technika badań wysokonapięciowych, WNT, Warszawa, 1985 3. Wodziński J.: Wysokonapięciowa technika prób i pomiarów, PWN, 1997	
	eResources addresses		
Example issues/ example questions/ tasks being completed	<p>Provide limit values for the electric and magnetic field near construction objects located at the HV lines. Methods for limiting the electric field intensity.</p> <p>Discuss the surface contamination sparc mechanism.</p> <p>Give exemplary constructions of support and bushing insulators.</p> <p>Principles of designing support systems</p> <p>Give the constructions of modern HV cables and their accessories.</p> <p>Provide methods and rules for laying power cable lines</p> <p>Provide the rules for designing cable lines.</p> <p>Principles of monitoring the state of HV insulation in the power system</p> <p>Discuss the method of measuring partial discharges</p> <p>Discuss the basic methods of performing voltage tests of insulation systems</p> <p>The lifetime of insulation and its forecasting.</p>		
Practical activities within the subject	Not applicable
