

Subject card

Subject name and code	Numerical methods, PG_00064606						
Field of study	Metody numeryczne						
Date of commencement of studies	February 2026		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Division of Computational Chemical Physics -> Institute of Physics and Applied Computer Science -> Faculty of Applied Physics and Mathematics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. Julien Guthmuller				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	The aim of the course is to equip students with advanced tools for numerical methods.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W04] has enhanced knowledge of mathematical, numerical and simulation methods applied in the description and modelling of physical phenomena		He has knowledge of numerical methods for the description of physical phenomena.		[SW1] Ocena wiedzy faktograficznej		
	[K7_U02] has enhanced knowledge of programming languages and can use software packages		Has the practical ability to program in the language.		[SU4] Ocena umiejętności korzystania z metod i narzędzi		
	[K7_U05] can plan and conduct theoretical calculations, experimental research and computer simulations, critically analyze their results, draw conclusions and form reasoned opinions		Can perform numerical calculations.		[SU1] Ocena realizacji zadania		
Subject contents	Course content – lecture 1. Ordinary differential equations: Euler methods, Runge-Kutta methods, adaptive step sizes, the Runge-Kutta-Fehlberg method. 2. Second order ordinary differential equations. Examples: oscillators equations, Schroedinger equation, several dependent variables. 3. Continuation: finite differences, discretization error. 4. Eigenvalues via finite differences. An example of vibrating string. 5. Continuation: the power method and the finite elements method. 6. The Fourier series and the Fourier transform. Convolution and correlation. The discrete Fourier transform. 7. Spectrum analysis. Computerized tomography. 8. Classes of partial differential equations. Finite difference equations. 9. Examples: the vibrating string and the steady-state heat equation. 10. Irregular physical boundary conditions. 11. More on finite difference equations. 12. Spectral methods. 13. The pseudo-spectral method. 14. Examples: a stationary wavepacket evolving in free space, the potential step, the well and the barrier.						

Prerequisites and co-requisites	Taking courses in mathematical analysis, algebra and discrete mathematics. Introduction to numerical methods during undergraduate studies.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercise	50.0%	50.0%
	Midterm colloquium	50.0%	50.0%
Recommended reading	Basic literature	(1) P.L. DeVries "A first course in computational physics" John Wiley 1994 (2) K. E. Atkinson, W. Han, D. E. Steward, "Numerical solution of ordinary differential equations", Wiley 2009 (3) W. H. Press et al. "Numerical recipes", Cambridge University Press 2007	
	Supplementary literature	(1) D. Kincaid, W. Cheney "Analiza numeryczna" WNT 2006 (2) A. Ralston "Wstęp do analizy numerycznej" PWN 1975 (3) D. Potter "Metody obliczeniowe fizyki" PWN 1977	
	eResources addresses		
	Example issues/ example questions/ tasks being completed	1. Methods of Euler 2. The method of Adams. Derivation. Basic patterns. Advantages and disadvantages. 3, Finite Difference Method. Introduce explicit iterative scheme to solve the diffusion equation. 4. The method of Crank-Nickolson	
Practical activites within the subject	Not applicable
