

Subject card

Subject name and code	SPECTROSCOPY TECHNIQUES IN CORROSION ANALYSIS, PG_00064353						
Field of study	TECHNIKI SPEKTROSKOPOWE W ANALIZIE KOROZYJNEJ						
Date of commencement of studies	February 2026		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Corrosion and Electrochemistry -> Faculty of Chemistry -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Łukasz Gawel				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		8.0		22.0	75
Subject objectives	The goal is to familiarize students with various spectroscopic tools: division, operating conditions and interpretation of measurement results with particular emphasis on potential application in the field of corrosion protection.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U03] designs innovative technological solutions for obtaining useful goods based on the latest knowledge in accordance with the current scientific literature		The student is able to select a technique needed to obtain information on the identification of the tested material, corrosion hazard, corrosion mechanism, degree of degradation and design an experiment using the selected method.		[SU4] Ocena umiejętności korzystania z metod i narzędzi [SU1] Ocena realizacji zadania		
	[K7_U04] predicts the properties of the materials obtained and the processes involving them, based on knowledge of corrosion and related fields		The student recognizes spectroscopic methods used to study processes occurring on the surfaces of solids.		[SU4] Ocena umiejętności korzystania z metod i narzędzi		
	[K7_K01] critically evaluates the content of scientific and practical problems		The student is able to search for information on the interpretation of measurement results and the computational models used in available literature databases.		[SK5] Ocena umiejętności rozwiązywania problemów występujących w praktyce		
	[K7_W02] has the knowledge of materials necessary to describe and understand the relationship between chemical composition and physical properties		The student understands the general laws on which the techniques discussed are based. The student is able to select a technique for a specific need, knows its possibilities and limitations.		[SW1] Ocena wiedzy faktograficznej		
Subject contents	Course content – lecture Lectures and laboratories will cover: electrochemical impedance spectroscopy (EIS), dynamic electrochemical impedance spectroscopy (DEIS), nonlinear electrochemical impedance spectroscopy (NLEIS), X-ray photoelectron spectroscopy (XPS) and Auger photoelectron spectroscopy (AES), Raman spectroscopy, X-ray microanalysis (EDX), acoustic spectroscopy.						

Prerequisites and co-requisites	The basic knowledge on solid state physics, electrotechnics, electrochemistry and corrosion science		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	lecture	60.0%	40.0%
	laboratories	60.0%	60.0%
Recommended reading	Basic literature	R. Feynmann, Feynmana wykłady z fizyki. T. 1, cz. 2, PWN, Warszawa, 2012 R. Kelsall, I. Hamley, M. Geoghegan, Nanotechnologie, PWN, Warszawa, 2008 J. Watts, J. Wolstenholme, Surface analysis by XPS and AES, Wiley, New York, 2003	
	Supplementary literature	articles in JCR journals, sources on eNauczanie website	
	eResources addresses		
	Example issues/ example questions/ tasks being completed	Methods for determining the corrosion rate,Methods for assessing the degree of degradation of: coating system, passive layer, material structureMethods for identification of composition of metals and alloysMethods for evaluation of the mechanism and dynamics of corrosion processes	
Practical activities within the subject	Not applicable		

Document generated electronically. Does not require a seal or signature.
