

Subject card

Subject name and code	ECOLOGICAL, ECONOMIC AND ETHICAL ISSUES FOR TODAY, PG_00064298						
Field of study	Chemical Technology						
Date of commencement of studies	February 2026	Academic year of realisation of subject			2026/2027		
Education level	second-cycle studies	Subject group			Humanistic-social subject group		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Chemistry and Technology of Functional Materials -> Faculty of Chemistry -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Anna Schmidt					
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
	eNauczanie source address: <a href="https://enauczanie.pg.edu.pl/2025/my/">https://enauczanie.pg.edu.pl/2025/my/</a>						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	30	5.0		40.0		75
Subject objectives	The purpose of the course is to point out the essence of the balance between ecology and economics in respecting ethical standards when modifying and implementing new technologies.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_W71] has general knowledge in humanistic, social, economic or legal sciences, including their fundamentals and applications	The student has a general knowledge of today's problems arising from the design and implementation of ecological and economic processes in an ethical manner.			[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge		
	[K7_U71] is able to apply knowledge from humanistic, social, economic or legal sciences in order to solve problems	The student is able to apply the acquired knowledge when solving technological (economic) problems while respecting the natural environment and in accordance with ethical principles.			[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	[K7_W06] integrates knowledge from different disciplines, principles of intellectual property protection and patent law, relevant for appropriate interpretation and application in scientific, sustainable economic activities	The student knows the basics of economics, ecology, and ethics and is able to integrate them when assessing contemporary technological and economic processes.			[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge		
	[K7_K71] is able to explain the need to apply knowledge from humanistic, social, economic or legal sciences in order to function in a social environment	The student understands the importance of social, ethical, and economic aspects in the design and implementation of chemical technologies, taking into account the principles of sustainable development.			[SK3] Assessment of ability to organize work [SK2] Assessment of progress of work [SK1] Assessment of group work skills		

Subject contents	<p>Course content – lecture</p> <p>Students integrate their existing knowledge of ecology, ethics, and economics to identify, analyse, and evaluate contemporary technological and societal challenges. The course focuses on understanding the interrelationships between economic, environmental, and ethical dimensions, as well as on developing practical approaches to balancing these aspects in engineering and industrial practice. Topics include the application of sustainable development principles to the reassessment of economic models, the interpretation of ecological issues as social challenges, and the ethical implications of technological decision-making. Students examine current problems at the interface of ecology, economics, and ethics, seeking solutions that balance environmental, economic, and societal interests.</p>		
	<p>Course content – project</p> <p>Working in teams of 24 people on the analysis of a selected issue combining ecological, economic, and ethical aspects. Identification of conflicts of interest and potential compromises between environmental, cost, and social requirements. Assessment of the impact of a selected technological process, product, or engineering solution in the context of sustainable development. Development of variants of solutions that minimize negative impact and proposal of an optimal solution justified by analysis of three areas: economic, ecological, and ethical. Preparation of a team project in written form (report). Development and presentation of a multimedia presentation summarizing the results of the team's work, together with justification for the decisions made. Assessment of teamwork, division of responsibilities, and effectiveness of communication within the group.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		60.0%	50.0%
		60.0%	50.0%
