

Subject card

Subject name and code	Nuclear cogeneration, PG_00065891						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Marcin Jaskólski				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0	15.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		6.0		34.0	100
Subject objectives	The aim of the course is for students to master knowledge related to the technology of nuclear power plants, including systems adapted to heat dissipation for heating systems and/or hydrogen production. Students will also learn about key issues in the field of safety, operation and profitability of nuclear power plants operating in combination.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U12] can formulate a specification of simple engineering tasks of a practical nature related to the field of study		Calculates the quantities characteristic of a nuclear combined heat and power plant system.		[SU1] Assessment of task fulfilment		
	[K6_W08] has knowledge in the field of energy storage systems: mechanical, thermal, electrical and others, knows the basics of thermodynamics and fluid mechanics, as well as the construction and operation of thermal energy equipment, hydrogen installations, process equipment, including renewable energy sources		Describes the principle of operation of nuclear combined heat and power systems for the production of electricity, heat and hydrogen.		[SW1] Assessment of factual knowledge		
	[K6_K02] can work in a group taking on different roles in it		Presents an analysis of a selected problem in the field of nuclear cogeneration		[SK4] Assessment of communication skills, including language correctness		

Subject contents	Course content – lecture Lecture - "The current state and prospects for the development of nuclear power in the world. Generation of nuclear power reactors. Classification of nuclear power plants. General characteristics of basic equipment and principle of operation of nuclear power plant with pressurized water reactor. Nuclear fuel management. Fuel cycle. Systems of radioactive waste management. Operation of nuclear power plants. Nuclear power safety and security issues. Cogeneration systems in nuclear power - generation of heat and/or hydrogen. Evaluating costs and assessing cost-effectiveness of using cogeneration in a nuclear power plant." Project "Nuclear power plant as a source of heat in the heating system" - construction of a thermal and flow model of a selected nuclear power plant, taking into account heat consumption for heating purposes. Seminar - a presentation on a selected topic, related to cogeneration and nuclear energy.		
Prerequisites and co-requisites	Subjects: mathematics, heat transfer, thermodynamics, fluid mechanics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Test	60.0%	50.0%
	Presentation	60.0%	15.0%
	Project	60.0%	35.0%

	eResources addresses	Basic https://www.iaea.org/publications/13385/guidance-on-nuclear-energy-cogeneration - Guidance on Nuclear Energy Cogeneration
Example issues/ example questions/ tasks being completed	1. Draw diagrams of the basic cycles of nuclear power plants with PWR, BWR and SFR reactors. 2. Identify the basic equipment in the nuclear power plant in the drawing (eg reactor pressure vessel, primary pump, pressurizer, steam generator, "core catcher"). 3. Calculate the basic values (electrical power, heat output, thermal capacity, coolant flowrate) in the basic cycle of a nuclear power plant with a PWR reactor. 4. Present a method and calculate the costs of generating electricity in a nuclear power plant. 5. Determine the profitability conditions for the introduction of the cogeneration in the nuclear power plant unit.	
Practical activities within the subject	Not applicable	

Document generated electronically. Does not require a seal or signature.
