

Subject card

Subject name and code	Experimental Methods in Strength of Mechanics, PG_00062604										
Field of study	Civil Engineering										
Date of commencement of studies	October 2024		Academic year of realisation of subject		2025/2026						
Education level	first-cycle studies		Subject group								
Mode of study	Full-time studies		Mode of delivery		at the university						
Year of study	2		Language of instruction		Polish						
Semester of study	4		ECTS credits		2.0						
Learning profile	general academic profile		Assessment form		assessment						
Conducting unit	Department of Structural Mechanics -> Faculty of Civil and Environmental Engineering -> Faculties of Gdańsk University of Technology										
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marcin Krajewski								
	Teachers										
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM				
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15				
E-learning hours included: 0.0											
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM				
	Number of study hours	15		0.0		0.0	15				
Subject objectives	The purpose of the laboratory is an verification of theory of structural mechanics using model testing.										
Learning outcomes	Course outcome		Subject outcome			Method of verification					
	[K6_U01] Apply knowledge and understanding of mathematics as well as sciences and engineering disciplines underlying civil engineering to solve engineering problems and issues.		The student is able to provide research in his scope			[SU2] Assessment of ability to analyse information					
	[K6_U02] Analyse & solve engineering issues & problems in the field of civil engineering by applying appropriate and relevant established analytical, numerical and experimental methods.		The student is able to provide research in his scope			[SU2] Assessment of ability to analyse information					
	[K6_U05] Conducts research (obtaining information, simulations, experimental methods) in the field of construction in order to solve specific tasks and report research results.		The student is able to provide research in his scope			[SU2] Assessment of ability to analyse information					
	[K6_W02] Demonstrate knowledge and understanding of the processes and established methods of analysis / solution of engineering issues & problems in the field of civil engineering and of their limitations.		Students shows abilities in structural mechanics			[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge					
Subject contents	Course content – laboratory The experiments on statistically determinant and undeterminant structures like beams ,trusses and frames are individually carried out and analysed.										
Prerequisites and co-requisites	Courses: Engineering Mechanics (BSP012), Strength of Materials (BSP015) should be completed. Course Structural Analysis (BSP020) should be taken. Precondition to the executing of experiments is acquaintance with the Ref. [1].										

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade	
	Defences of reports (oral or written)	60.0%	70.0%	
	Test	60.0%	30.0%
