

Subject card

Subject name and code	TECHNICAL ERGONOMICS, PG_00070642						
Field of study	Engineering Management						
Date of commencement of studies	October 2026		Academic year of realisation of subject		2027/2028		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Informatics In Management -> Faculty of Management and Economics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Marcin Sikorski				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0	0.0	45
	E-learning hours included: 0.0						
	eNauczanie source address: https://enauczanie.pg.edu.pl/moodle/course/view.php?id=46359						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		3.0		27.0	75
Subject objectives	Preparing students to evaluate and design workplaces in accordance with ergonomic principles, based on knowledge of human workload in the workplace, organizational and ergonomic standards, as well as fostering attitudes related to the responsible application of regulations and standards to ensure workplace safety and efficiency.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_K02] is prepared to make competent and ethical decisions to create and maintain economic, social, and environmental values, demonstrating entrepreneurial actions.		is able to analyze, evaluate, and design workstations in accordance with ergonomic principles, as well as technical, organizational, and occupational safety requirements.		[SK3] Assessment of ability to organize work		
	[K6_W07] knows and understands advanced methods for analyzing the management process in technical, legal, economic, financial, and social contexts.		knows and understands the principles of workplace ergonomics in the context of designing and organizing workstations in accordance with technical and organizational requirements, as well as ensuring safety and work efficiency.		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U03] collaborates with others in solving interdisciplinary problems.		is able to collaborate with representatives of different specializations in analyzing and improving a workstation, taking into account technical, organizational, and ergonomic aspects.		[SU1] Assessment of task fulfilment		

Subject contents	Course content – lecture 1. Ergonomics - Introduction. Ergonomic system: human - technology environment. 2. Evolution of work processes in the digital environment. 3. Analysis and reduction of physical load at workplaces. 4. Workspace design. 5. Ergonomics and organisation of computer-supported work. 6. Methods of assessing mental load and shaping the content of work. 7. Analysis of the factors of the material working environment (1). Analysis of lighting conditions and electromagnetic fields at workplaces. 8. Analysis of the factors of the material working environment (2). Analysis of acoustic conditions, vibrations, microclimate and air pollutants at workplaces. 9. Methods of occupational risk assessment at workplaces. 10. Systemic management of occupational safety in the enterprise. 11. Employer's obligations to ensure safe working conditions. 12. Assessment of the impact of the implementation of new technologies and AI in workplaces. 13. Macroergonomics - shaping the organisation of work and employer-employee relations. Course content – project 1. Job description. Assessment of the transparency of communication of working conditions. 2. Analysis and evaluation of physical load. Designing improvements. 3. Analysis and design of workspaces. Designing improvements. 4. Analysis and assessment of mental load. Designing improvements. 5. Analysis and shaping of the material work environment. Designing improvements. 6. Occupational risk analysis and assessment. Designing improvements. 7. Assessment of the impact of the implementation of new technologies and AI in workplaces. 8. Developing a plan for improving working conditions and employees wellbeing.											
Prerequisites and co-requisites												
Assessment methods and criteria	<table><tr><th>Subject passing criteria</th><th>Passing threshold</th><th>Percentage of the final grade</th></tr><tr><td>Project tasa</td><td>60.0%</td><td>50.0%</td></tr><tr><td>Problem-based questions</td><td>60.0%</td><td>50.0%</td></tr></table>	Subject passing criteria	Passing threshold	Percentage of the final grade	Project tasa	60.0%	50.0%	Problem-based questions	60.0%	50.0%		
Subject passing criteria	Passing threshold	Percentage of the final grade										
Project tasa	60.0%	50.0%										
Problem-based questions	60.0%	50.0%
