

Subject card

Subject name and code	DESCRIPTIVE STATISTICS, PG_00070721						
Field of study	Engineering Management						
Date of commencement of studies	October 2026	Academic year of realisation of subject				2026/2027	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Part-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	2	ECTS credits				4.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Statistics and Econometrics -> Faculty of Management and Economics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor						
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	18.0	0.0	18.0	0.0	0.0	36
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	36		3.0		61.0	100
Subject objectives	preparation of students to apply statistical methods and IT tools in the analysis of mass processes and to interpret the obtained results in the context of socio-economic and business problems.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_W02] possesses advanced knowledge of methods and techniques that enable precise formulation and effective problem solving.		knows and understands statistical methods used to analyze mass processes and to formulate research problems and interpret results in socio-economic and business contexts			[SW1] Assessment of factual knowledge	
	[K6_U07] uses advanced information technologies to enhance data analysis and management processes.		is able to use statistical software to conduct data analysis, applying appropriate methods and formulating conclusions that support the decision-making proces			[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools	
	[K6_K03] is prepared to critically assess the knowledge they possess, which is necessary for solving cognitive and practical problems, and to supplement any gaps with opinions from external experts.		is ready to critically evaluate their knowledge of descriptive statistics and identify the limitations of applied method			[SK5] Assessment of ability to solve problems that arise in practice	

Subject contents	Course content – lecture											
	<ol style="list-style-type: none"> <li>1. Basic concepts of statistics: population, sample, and statistical variables</li> <li>2. Types of statistical studies and sampling methods (random and non-random)</li> <li>3. Classification of statistical characteristics and the concept of a random variable</li> <li>4. Distributions of random variables as well as statistical series and histograms</li> <li>5. Measures of central tendency (means, median, mode, quartiles, percentiles)</li> <li>6. Measures of data variability (variance, standard deviation, range, and coefficients of variation)</li> <li>7. Measures of asymmetry and kurtosis of a distribution and their interpretation</li> <li>8. Visualization of statistical data (histogram, box-and-whisker plot, scatter plot)</li> <li>9. Basics of statistical inference and the central limit theorem</li> <li>10. Correlation analysis and relationships between variables</li> <li>11. Analysis of relationships between qualitative characteristics (contingency tables, chi-square test, measures of association)</li> <li>12. Introduction to regression analysis (simple and multiple regression)</li> <li>13. Evaluation of statistical model quality and significance of parameters</li> <li>14. Analysis of the dynamics of phenomena and time series</li> <li>15. Errors in statistical research and modern methods of data visualization</li> </ol>
