

## Subject card

Subject name and code	Mathematics II, PG_00055648						
Field of study	Architecture						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			English		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Faculty of Electronics Telecommunications and Informatics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Magdalena Łapińska				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		24.0	75
Subject objectives	Students obtain competence in using methods of mathematical analysis (single variable calculus) and knowledge how to solve simple problems that are found in the field of engineering, in particular connected to data engineering.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U04] is able to use analytical methods to formulate and solve project tasks		Student applies the concepts of limit, continuity, and derivatives of functions to solve curve sketching problems. Student uses definite integral to solve geometrical problems		[SU4] Assessment of ability to use methods and tools		
	[K6_W01] knows and understands construction problems, building and engineering issues related to building design; principles, solutions, constructions and building materials used in simple engineering tasks in the field of architectural and urban design		knows and understands mathematics to the extent necessary to formulate and solve tasks in the area of architectural and urban design; defines basic concepts of differential and integral calculus on single-variable function. Student gives the graphical interpretation of definite integral. Student lists geometrical applications of definite integrals		[SW1] Assessment of factual knowledge		

Subject contents	<p>Course content – lecture</p> <ul style="list-style-type: none"> <li>• Partial derivatives</li> <li>• Double integral over a rectangular region. Change of variables in double integral. Applications</li> <li>• Continuity.</li> <li>• Derivative of a function of one variable. Geometrical and physical interpretation. Basic differentiation formulas.</li> <li>• Product, quotient, and chain rules.</li> <li>• Applications of differentiation. Optimization. Concavity.</li> <li>• Indefinite integral. Basic formulas. Integration by parts, by substitution</li> <li>• Definite integral. Geometrical interpretation. Fundamental Theorem of Calculus.</li> <li>• Geometrical applications of definite integrals: areas, volumes, lengths.</li> <li>• Partial derivatives</li> <li>• Double integral over rectangular and normal regions. Change of variables in double integral. Applications</li> </ul> <hr/> <p>Course content – exercises</p> <ul style="list-style-type: none"> <li>• Partial derivatives</li> <li>• Double integral over a rectangular region.
