

Subject card

Subject name and code	Electric Drive, PG_00056915						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2026	Academic year of realisation of subject				2027/2028	
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	2	Language of instruction				Polish	
Semester of study	4	ECTS credits				4.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Electric Drives and Energy Conversion -> Faculty of Electrical and Control Engineering -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jarosław Guziński				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		35.0	100
Subject objectives	Get basic knowledge and skill on electrical drives						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	K6_W06		Student defines work regimes of electrical machines, distinguishes kinds of load, defines machine loads, explains equations of machine dynamics, principles of motion control, determines machine models, defines structures of drive systems with AC and DC machines, explains principles of energy recovery, explains basic principles of vector control.			[SW1] Assessment of factual knowledge	
	K6_U07		Is able to select and configure an electrical drives for operation in electrical power plants.			[SU1] Assessment of task fulfilment	

Subject contents	<p>Course content – lecture</p> <p>Lectures. Theory of electromechanical energy conversion. The general form of the equations of motion drive. Converting the torque to the motor shaft. Mechanical characteristics of electric motors and load machines. Drives with DC machines: output characteristics; power converters - choppers, rectifiers, control system, dual-area of drive operation, the selection and tuning of the controllers. Classification of power converters for AC electric motors AC: frequency converters. Drives with induction motors: characteristics, start-up, speed control and braking; mechanical characteristics in case of inverter voltage and current type supply. Phenomena related to power a converter motors, dV / dt, bearing currents, motor filters. Induction motor control methods: control $V / f = \text{const.}$ (scalar), field-oriented (vector) control to direct torque control (DTC), non-linear control (multiscalar). Sensorless control of induction motors. Drives with double fed induction machines: constant torque cascade, hydroelectric power generators and wind turbines. Synchronous motor drives: properties, accelerating, braking, speed control. Drive systems with motors permanent magnet synchronous (PMSM). Drive systems of brushless DC motors (BLDCM). The properties and control of switched reluctance motor drives. The properties and control of switched reluctance motor drives. Transient analysis: start-up, change of speed and load. Concurrency of electric motors. Speed and shaft position sensors. mechanical coupling and gearboxes, motoreducers. Types of electric motors. Selection of electric motors for drive systems: heating, power calculation, supply cables, and protection. Cooling of electrical machines. Selection and configuration of frequency converters. Industrial drive systems: drives for pumps, fans, centrifuges, compressors, cranes. Electric drives vehicles. Fundamentals of computer simulation of electric drives.</p> <p>Laboratory. DC drive with controlled rectifier. Scalar U/f control of induction motor. Electric drive with voltage inverter and induction motor - field oriented control (FOC). Programming of LS-iC5 frequency converter for operation in vehicle drive. Nonlinear (multiscalar) control od induction motor.</p>											
Prerequisites and co-requisites	Basic knowledge on electrical machines, power electronics and control theory.											
Assessment methods and criteria	<table border="1" data-bbox="450 884 1489 981"> <thead> <tr> <th data-bbox="450 884 798 913">Subject passing criteria</th> <th data-bbox="804 884 1141 913">Passing threshold</th> <th data-bbox="1147 884 1489 913">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="450 922 798 952">Midterm colloquium</td> <td data-bbox="804 922 1141 952">60.0%</td> <td data-bbox="1147 922 1489 952">50.0%</td> </tr> <tr> <td data-bbox="450 960 798 981">Laboratory exercises</td> <td data-bbox="804 960 1141 981">60.0%</td> <td data-bbox="1147 960 1489 981">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Midterm colloquium	60.0%	50.0%	Laboratory exercises	60.0%	50.0%
