

## Subject card

Subject name and code	Construction materials, PG_00055365						
Field of study	Mechatronics						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			6.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. Agata Lisińska-Czekaj					
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	0.0	30.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	75	4.0	71.0	150		
Subject objectives	The aim of the course is to familiarize students with the basic properties of metal materials, alloys, ceramic, polymer and composite materials with special electrical, mechanical and optical properties, especially for the construction of mechatronic systems.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U03] has self-learning skills				[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	[K6_U01] is able to acquire information from literature, databases and other, properly chosen sources, integrate these information, interpret them, draw conclusions and formulate opinions				[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	[K6_W05] has knowledge in the field of electrical engineering, electronics and construction materials applied in mechatronics				[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		

Subject contents	<p>Course content – lecture</p> <p>Materials and their importance in technology. Structure of matter. Characteristics of the main groups of materials. General principles of selection of engineering materials in mechanical engineering. Crystalline structure of materials. Defects in crystal structure. Influence of structure defects on mechanical properties of materials. Polymorphism. Crystallization of metals and alloys.</p> <p>Mechanical properties of materials. Methods of testing materials. Anisotropy of properties. Degradation of materials. Brittle fracture. Fatigue of materials. High temperature degradation. Chemical, electrochemical and biological corrosion. Forms of corrosion: general, local, galvanic, selective, intercrystalline, gas, stress, fatigue, hydrogen, impact attack, cavitation erosion.</p> <p>Metal alloys. Mechanisms of strengthening of metals and alloys, phase transformations. Phase equilibrium systems. Classification of phase transformations. Transformations in the solid state. Phase equilibrium system iron-carbon. Phase and structural components of the system.</p> <p>Manufacture of iron and its alloys. Metallurgy of pig iron. Metallurgy of steel. Steelmaking processes. Metallurgy of cast iron. Methods of manufacturing semi-finished products and products.</p> <p>Division and classification of steels. Alloyed and non-alloyed steels. Structural steels. Tool steels. Steels with special properties corrosion resistant steels, heat resistant and heat resistant steels.</p> <p>Cast iron alloys. Steel and cast iron.</p> <p>Standardization and classification and designation systems for steels and cast irons.</p> <p>Formation of structure and properties of engineering materials by technological methods. Crushing and recrystallization. Heat and thermo-chemical treatment. Transformations during heating and cooling of ferrous alloys. CTP diagrams. Hardenability of steel. Annealing of steel, volumetric and surface hardening, carburizing, nitriding.</p> <p>Technical non-ferrous metal alloys. Copper and its alloys. Light metals and their alloys. Zinc and its alloys. Bearing alloys. Nickel, titanium and cobalt alloys. Low melting alloys.</p> <p>Ceramic materials division, properties, manufacturing. Polymeric materials division, properties, manufacturing. Structural composite materials division, properties, manufacturing. Biomimetics. Trends in materials development</p>											
Prerequisites and co-requisites												
Assessment methods and criteria	<table border="1" data-bbox="451 792 1495 898"> <thead> <tr> <th data-bbox="451 792 798 831">Subject passing criteria</th> <th data-bbox="798 792 1141 831">Passing threshold</th> <th data-bbox="1141 792 1495 831">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="451 831 798 860"></td> <td data-bbox="798 831 1141 860">50.0%</td> <td data-bbox="1141 831 1495 860">50.0%</td> </tr> <tr> <td data-bbox="451 860 798 889"></td> <td data-bbox="798 860 1141 889">50.0%</td> <td data-bbox="1141 860 1495 889">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade		50.0%	50.0%		50.0%	50.0%
