

Subject card

Subject name and code	Electric Drives (WEiA), PG_00042095						
Field of study	Power Engineering						
Date of commencement of studies	October 2024	Academic year of realisation of subject				2026/2027	
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	3	Language of instruction				English	
Semester of study	6	ECTS credits				4.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department of Electric Drives and Energy Conversion -> Faculty of Electrical and Control Engineering -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jarosław Guziński				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	15.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	5.0		65.0	100	
Subject objectives	Get basic knowledge and skill on electrical drives						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U01] can obtain information from literature and other sources, organize, interpret it and draw and formulate conclusions; has the ability to self-educate, interprets the results of completed engineering tasks, is able to design simple energy systems and their systems	Is able to obtain information that allows calculation and design of the drive system for selected types of load mechanisms.			[SU2] Assessment of ability to analyse information		
	[K6_K03] is able to react in emergency situations, threats to health and life when using energy devices, is aware of the impact of engineering activities on the environment	Is able to select procetions systems for electric drives			[SK5] Assessment of ability to solve problems that arise in practice		
	[K6_W03] knows the basics of automation and automatic regulation, knows the principles of the selection of electrical devices, drive systems and their control	Is able to do a technical analysis of the control systems for electric drives with adjustable speed in application to selected types of load mechanisms.			[SW1] Assessment of factual knowledge		
	[K6_W05] has structured knowledge in the field of electrical engineering and electronics, necessary to understand the basics of operation and selection of electrical machines, electricity transmission systems and power electronic devices	Student defines work regimes of electrical machines, distinguishes kinds of load, defines machine loads, explains equations of machine dynamics, principles of motion control, determines machine models, defines structures of drive systems with AC and DC machines, explains principles of energy recovery, explains basic principles of vector control.			[SW1] Assessment of factual knowledge		

Subject contents	<p>Course content – lecture</p> <p>Lectures. Theory of electromechanical energy conversion. The general form of the equations of motion drive. Converting the torque to the motor shaft. Mechanical characteristics of electric motors and load machines. Drives with DC machines: output characteristics; power converters - choppers, rectifiers, control system, dual-area of drive operation, the selection and tuning of the controllers. Classification of power converters for AC electric motors AC: frequency converters. Drives with induction motors: characteristics, start-up, speed control and braking; mechanical characteristics in case of inverter voltage and current type supply. Phenomena related to power a converter motors, dV / dt, bearing currents, motor filters. Induction motor control methods: control $V / f = \text{const.}$ (scalar), field-oriented (vector) control to direct torque control (DTC), non-linear control (multiscalar). Sensorless control of induction motors. Drives with double fed induction machines: constant torque cascade, hydroelectric power generators and wind turbines. Synchronous motor drives: properties, accelerating, braking, speed control. Drive systems with motors permanent magnet synchronous (PMSM). Drive systems of brushless DC motors (BLDCM). The properties and control of switched reluctance motor drives. The properties and control of switched reluctance motor drives. Stepper motors. Transient analysis: start-up, change of speed and load. Concurrency of electric motors. Speed and shaft position sensors. mechanical coupling and gearboxes, motoreducers. Types of electric motors. Selection of electric motors for drive systems: heating, power calculation, supply cables, and protection. Cooling of electrical machines. Selection and configuration of frequency converters. Industrial drive systems: drives for pumps, fans, centrifuges, compressors, cranes. Electric drives vehicles. Fundamentals of computer simulation of electric drives.</p> <p>Laboratory. DC drive with controlled rectifier. Scalar U/f control of induction motor. Electric drive with voltage inverter and induction motor - field oriented control (FOC). Programming of LS-iC5 frequency converter for operation in vehicle drive.</p> <p>Project. Electric drive design for a selected type of load mechanism (presentation of the theory of the selected drive system, calculations, selection of elements, elaboration of technical documentation, economic analysis, preparation of drive system simulation, preparation and presentation of a multimedia presentation)</p>											
Prerequisites and co-requisites	Basic knowledge on electrical machines, power electronics and control theory.											
Assessment methods and criteria	<table border="1" data-bbox="450 929 1489 1032"> <thead> <tr> <th data-bbox="450 929 794 958">Subject passing criteria</th> <th data-bbox="794 929 1139 958">Passing threshold</th> <th data-bbox="1139 929 1489 958">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="450 958 794 987">Final test</td> <td data-bbox="794 958 1139 987">60.0%</td> <td data-bbox="1139 958 1489 987">50.0%</td> </tr> <tr> <td data-bbox="450 987 794 1032">Project</td> <td data-bbox="794 987 1139 1032">60.0%</td> <td data-bbox="1139 987 1489 1032">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Final test	60.0%	50.0%	Project	60.0%	50.0%
