

Subject card

Subject name and code	Artificial Intelligence Methods, PG_00038279						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Krzysztof Armiński					
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	20.0	0.0	10.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	30	5.0	40.0	75		
Subject objectives	The aim of the course is to introduce students to the practical application of neural networks and evolutionary algorithms. Students will learn to train neural networks using the backpropagation algorithm and apply genetic algorithms, adapting them to various problems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U08] has the necessary preparation to work in an industrial environment, carry out research, apply principles of health and safety at work		The student knows the basics of Python and can write a genetic algorithm to solve an optimization problem.		[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	[K7_W05] has knowledge of artificial intelligence computing techniques, inference, learning and solution-finding methods in algorithmic terms applied to automation and robotics systems		The student knows the methods and algorithms of artificial intelligence used in simple problems in the field of automation.		[SW1] Assessment of factual knowledge		
Subject contents	Course content – lecture LECTURE: Neural networks: training of multilayer perceptrons and reinforcement learning, including task formulation, value function, and the backpropagation method. Solution space exploration using genetic algorithms (GA), covering their structure and operation, population representation, initialization, fitness function, genetic operators, and algorithm parameters. Theoretical foundations of genetic algorithms and their application to optimization problems. Fuzzy logic: representation and processing of qualitative knowledge, fuzzy sets and operations on them, fuzzy inference, fuzzy controllers, and the development of fuzzy rule bases based on numerical data.						
	Course content – laboratory LABORATORY EXERCISES: Implementation and analysis of the properties of an evolutionary algorithm, including the examination of a selected genetic operator. Solving a constrained optimization problem using an evolutionary method, exemplified by path optimization in a static environment.						
Prerequisites and co-requisites	Knowledge of the basics of automation, familiarity with linear algebra, and programming skills.						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Colloquium	50.0%	60.0%
	RepoEvaluation of laboratory exercises	50.0%	40.0%

	eResources addresses		
Example issues/ example questions/ tasks being completed	The tasks of artificial intelligence - formal and approximate reasoning, learning from the information search space of solutions. Fuzzy sets, operations on sets, fuzzy inference, fuzzy controller. Neural networks, multilayer perceptron learning, learning by reinforcement. Design and functionality of AG, the representation of the population, the population of initial adjustment function, genetic operators, parameters of the algorithm.		
Practical activities within the subject	Not applicable
