

Subject card

Subject name and code	Numerical methods, PG_00064606						
Field of study	Technical Physics						
Date of commencement of studies	February 2027	Academic year of realisation of subject				2026/2027	
Education level	second-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	1	ECTS credits				4.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Division of Computational Chemical Physics -> Institute of Physics and Applied Computer Science -> Faculty of Applied Physics and Mathematics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. Julien Guthmuller				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	The aim of the course is to equip students with advanced tools for numerical methods.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U05] is able, individually or as part of a team (including in a leadership role), to plan and conduct advanced theoretical calculations, experimental studies and computer simulations aimed at solving complex and non-standard scientific and engineering problems, and to critically analyse results and formulate well-founded conclusions		Can perform numerical calculations.		[SU1] Assessment of task fulfilment		
	[K7_U02] demonstrates advanced programming skills in a selected language and the ability to use specialised software packages.		Has the practical ability to program in the language.		[SU4] Assessment of ability to use methods and tools		
	[K7_W04] possesses advanced knowledge of mathematical, numerical and simulation methods used in the description and modelling of physical phenomena.		He has knowledge of numerical methods for the description of physical phenomena.		[SW1] Assessment of factual knowledge		

Subject contents	<p>Course content – lecture</p> <ol style="list-style-type: none"> <li>1. Ordinary differential equations: Euler methods, Runge-Kutta methods, adaptive step sizes, the Runge-Kutta-Fehlberg method.</li> <li>2. Second order ordinary differential equations. Examples: oscillators equations, Schroedinger equation, several dependent variables.</li> <li>3. Continuation: finite differences, discretization error.</li> <li>4. Eigenvalues via finite differences. An example of vibrating string.</li> <li>5. Continuation: the power method and the finite elements method.</li> <li>6. The Fourier series and the Fourier transform. Convolution and correlation. The discrete Fourier transform.</li> <li>7. Spectrum analysis. Computerized tomography.</li> <li>8. Classes of partial differential equations. Finite difference equations.</li> <li>9. Examples: the vibrating string and the steady-state heat equation.</li> <li>10. Irregular physical boundary conditions.</li> <li>11. More on finite difference equations.</li> <li>12. Spectral methods.</li> <li>13. The pseudo-spectral method.</li> <li>14. Examples: a stationary wavepacket evolving in free space, the potential step, the well and the barrier.</li> </ol> <p>Course content – laboratory</p> <p>Ordinary differential equations: Euler methods, Runge-Kutta methods, adaptive step sizes, the Runge-Kutta-Fehlberg method.</p> <p>Second order ordinary differential equations.</p> <p>Finite differences, discretization error.</p> <p>Classes of partial differential equations. Finite difference equations.</p> <p>An example of vibrating string.</p> <p>Linear equation systems.</p> <p>Spectral methods. Steady-state heat equation.</p>											
Prerequisites and co-requisites	Taking courses in mathematical analysis, algebra and discrete mathematics. Introduction to numerical methods during undergraduate studies.											
Assessment methods and criteria	<table border="1" data-bbox="450 1158 1489 1256"> <thead> <tr> <th data-bbox="450 1158 794 1189">Subject passing criteria</th> <th data-bbox="794 1158 1139 1189">Passing threshold</th> <th data-bbox="1139 1158 1489 1189">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="450 1189 794 1220">Midterm colloquium</td> <td data-bbox="794 1189 1139 1220">50.0%</td> <td data-bbox="1139 1189 1489 1220">50.0%</td> </tr> <tr> <td data-bbox="450 1220 794 1256">Practical exercise</td> <td data-bbox="794 1220 1139 1256">50.0%</td> <td data-bbox="1139 1220 1489 1256">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Midterm colloquium	50.0%	50.0%	Practical exercise	50.0%	50.0%
