

Subject card

Subject name and code	Team Strategies, PG_00048467						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	February 2027	Academic year of realisation of subject			2027/2028		
Education level	second-cycle studies	Subject group			Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Decision Systems and Robotics -> Faculty of Electronics Telecommunications and Informatics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Tomasz Białaszewski					
	Teachers	dr inż. Tomasz Białaszewski					
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		16.0	50
Subject objectives	The main objective of the course is to familiarize students with the basic problems of collaborative strategies such as the use of particle swarm algorithm, the ant algorithm, stochastically distributed search algorithms making team strategy, multi-agent systems, modeling of intelligent co-operation, simulations of social behavior. Passing is realized through the exam and execution of the project						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, making assessment and critical analysis of the prepared software as well as a synthesis and creative interpretation of information presented with it	Student is able to explain the mechanisms used in swarm intelligence algorithms	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student is able to choose the appropriate swarm intelligence algorithm for an exemplary machine learning problem	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Student is able to implement the selected swarm intelligence algorithm for a given optimization problem	[SW3] Assessment of knowledge contained in written work and projects
Subject contents	Course content – lecture		
	<ol style="list-style-type: none"> 1. Course organization and assessment rules 2. Overview of the course topics 3. Review of methods and definitions of concepts related to swarm intelligence 4. Ant Colony Optimization algorithm 5. Firefly algorithms 6. Stochastic Diffusion Search 7. Gravitational Search Algorithm 8. Artificial Bee Colony algorithm 9. Cuckoo Search algorithm 10. Invasive Weed Optimization algorithm 11. Biogeography-Based Optimization algorithm 12. Charged System Search 13. Intelligent Water Drops algorithm 14. River Formation Dynamics algorithm 15. Imperialist Competitive Algorithm 16. Applications of swarm intelligence methods in engineering problems 		
	Course content – project		
	Implementation of selected swarm intelligence algorithms; analysis of their exploration/exploitation properties; comparison of their effectiveness, convergence speed, and stability; and evaluation of their applicability to engineering optimization problems.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	25.0%	40.0%
	Exam	50.0%	60.0%
