

Subject card

Subject name and code	Biosignal measurements and processing, PG_00053359						
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2027	Academic year of realisation of subject			2026/2027		
Education level	second-cycle studies	Subject group			Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics Telecommunications and Informatics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Adam Bujnowski					
	Teachers	dr inż. Adam Bujnowski dr Tomasz Neumann mgr inż. Ignacy Rogoń					
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		4.0		26.0	75
Subject objectives	To familiarize students with the methods of measurement and processing on selected examples of biosignals.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by: - appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation, - application of appropriate methods and tools	The student will design and implement a procedure to support advanced methods of biosignal analysis.	[SU3] Assessment of ability to use knowledge gained from the subject
	[K7_W02] knows and understands, to an increased extent, selected laws of physics and physical phenomena, as well as methods and theories explaining the complex relationships between them, constituting advanced general knowledge in the field of technical sciences related to the field of study	The student knows and understands the basics of physiology and pathology enabling the assignment and use of selected laws and physical phenomena to describe selected biosignals and to understand the relationships between them.	[SW1] Assessment of factual knowledge
	[K7_W01] knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study	The student is able to describe, using a mathematical language, a selected problem in the field of biosignals in terms of both measurement and processing, including extraction of features and classification.	[SW1] Assessment of factual knowledge
	[K7_U02] can perform tasks related to the field of study as well as formulate and solve problems applying recent knowledge of physics and other areas of science	The student will design and implement a solution that uses processing methods to automate the analysis of biosignals to achieve a specific goal.	[SU1] Assessment of task fulfilment
Subject contents	Course content – lecture Basic concepts, Classification of signals, definition of biosignals. Metrological problems. Electrocardiography - signal modeling. Custom electrocardiography. Derivative electrocardiographic signals. Electrocardiography - methods of processing, extraction and classification. Electrocardiography - new applications. Electromyography - signal source, mathematical model. Electromyography - methods of processing, analysis and classification. Electromyography - applications (prosthetics, control, assessment of fatigue, gait ...)		
Prerequisites and co-requisites	Knowledge of Anatomy, Physics, Mathematics at the 1st degree of engineering studies		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory	60.0%	60.0%
	Lecture	60.0%	40.0%
Recommended reading	Basic literature	Gari D. Clifford, Francisco Azuaje, Patrick E. McSharry, Advanced Methods and Tools for ECG Data Analysis, artechhouse.com	
	Supplementary literature	Leif Sornmo, Pablo Laguna, BIOELECTRICAL SIGNAL PROCESSING IN CARDIAC AND NEUROLOGICAL APPLICATIONS, Elsevier ACADEMIC PRESS	
	eResources addresses		
Example issues/ example questions/ tasks being completed	Design a filter to remove mains interference from the EKG/EMG signal		
Practical activities within the subject	Not applicable		

Document generated electronically. Does not require a seal or signature.
