

Subject card

Subject name and code	Mathematics II, PG_00059000						
Field of study	Environmental Engineering						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			9.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Mathematics Center -> Vice-Rector For Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Krzysztof Radziszewski				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		8.0		157.0	225
Subject objectives	Students obtain competence in the range of using methods of mathematical analysis and knowledge how to solve simple problems that can be found in the field of engineering.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	<p>[K6_U01] has the ability to self-education, can obtain information from literature, databases and other sources, uses information technology, Internet resources; can integrate the obtained information, make their interpretation, as well as draw conclusions and formulate and justify opinions</p>	<p>Student recognizes the importance of self-expanding knowledge and takes the challenge of working with a group to solve a problem. Student combines knowledge of mathematics with knowledge from other fields. Student recognizes the importance of skillful use of basic mathematical apparatus in terms of study in the future. Student recognizes the importance of self-expanding knowledge. Student uses methods of mathematical description of phenomena in the physical / mechanical. Student understands the need of lifelong learning. Student is able to inspire others and organize their learning process. Student is able to process the acquired information, analyze and interpret it, draw conclusions and reason opinions</p>	<p>[SU2] Assessment of ability to analyse information</p>
	<p>[K6_W01] has knowledge in the field of mathematics, including: linear algebra, mathematical analysis and elements of mathematical statistics, probability theory, applications of mathematics, including mathematical methods and numerical methods, necessary for: 1) description and analysis of hydrological phenomena; 2) description and analysis of meteorological phenomena; 3) solving project tasks of the sanitary industry;</p>	<p>Student lists geometrical applications of definite integrals. Student distinguishes between types of improper integrals. Student uses definite integral to solve geometrical tasks. Student computes partial derivatives and uses differential calculus to examine properties of the function of several variables. Student uses the basic operations on complex numbers. Student solves ordinary differential equations. Student computes multiple integrals and uses integral calculus to geometric and mechanics applications. Student computes the gradient of a scalar field, divergence and rotation of a vector field and a potential field. Student studies convergence of number series. Student calculates the radius of convergence and the interval of convergence of a power series. Student uses power series in order to compute sums of number series. Student calculates the probability of random events. Student describes the basic types of distributions of random variable. Student gives the definition of basic notions of probability theory.</p>	<p>[SW1] Assessment of factual knowledge</p>

Subject contents	<p>Course content – lecture</p> <p>Definite integrals in Riemanns sense: Newtona-Leibniza Thorem. Methods of evaluations of definite integrals. Applications of definite integrals. Improper integrals. Applications of improper integrals. Integration formulas, the substitution method of integration and integration by parts for definite integrals. Applications of integral calculus in computing areas of plane figures, lengths of arcs, volumes of solids of revolution.</p> <p>Functions of several variables: Limit and continuity of a function of several variables. Partial derivatives. Total differential. Taylors formula. Maxima and minima of a function of several variables. Implicit functions.</p> <p>Complex numbers: Algebraic, trigonometric, exponential form, operations, exponentiation (Moivre formula), finding roots of complex numbers. Operations on complex numbers.</p> <p>Ordinary differential equations: First order differential equations. General and particular solution. The Cauchy initial value problem. Variables separable, linear, Bernoulli, exact differential equations. Second order linear differential equations with constant coefficients. Fundamental set of solution of the homogeneous linear differential equation. Non-homogeneous linear differential equations. Higher order linear differential equations with constant coefficients. Double and triple integrals. Applications of multiple integrals. Line integrals with applications.</p> <p>Elements of field theory and differential geometry: Scalar and vector fields, the gradient of a scalar field, divergence and rotation of a vector field, a potential field. Line integrals with applications.</p> <p>Number series and function series: Number series. Convergent and divergent series. Convergence tests of the number series. Power series. Radius and interval of convergence. Integration and differentiation of power series. Examples of applications - approximate calculation of integrals.</p> <p>Calculus of probability: Discrete and continuous random variables, distribution function, expected value and variance of a random variable. Basic distribution of random variables.</p>											
Prerequisites and co-requisites	No requirements											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="454 1182 794 1211">Subject passing criteria</th> <th data-bbox="799 1182 1139 1211">Passing threshold</th> <th data-bbox="1144 1182 1482 1211">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="454 1218 794 1247">Midterm colloquium</td> <td data-bbox="799 1218 1139 1247">50.0%</td> <td data-bbox="1144 1218 1482 1247">40.0%</td> </tr> <tr> <td data-bbox="454 1254 794 1283">Written exam</td> <td data-bbox="799 1254 1139 1283">50.0%</td> <td data-bbox="1144 1254 1482 1283">60.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Midterm colloquium	50.0%	40.0%	Written exam	50.0%	60.0%

<p>Example issues/ example questions/ tasks being completed</p>	<ol style="list-style-type: none"> 1. Find the area between the two curves $y=e^x$ and $y=3-e^x$ from $x=-2$ to $x=0$. 2. Sketch the graph of the function $f(x,y)=x^2$. 3. Identify any local extrema of the function $f(x,y)=e^{x-y}(x^2-2y^2)$. 4. Find the absolute extrema of the function $f(x,y)=xy-x(x+1)-y(y+1)$ on the set $D=\{(x,y): x^2+y^2 \leq 25, y \geq 3\}$. 5. Solve the equation $y''+6y'+9y=10\sin x$. 6. Find the divergence and rotation of the vector field $[2xe^{3y+z^2}, 3x^2e^{3y+z}, 2zx+y]$. 7. Find the distribution function, expected value and variance of a random variable X: $P(-2)=0,1$, $P(-1)=0,5$, $P(0)=0,2$, $P(3)=0,1=P(5)$.
