

Subject card

Subject name and code	Wireless Communication Antennas, PG_00048103						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	October 2026	Academic year of realisation of subject			2029/2030		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	4	Language of instruction			Polish		
Semester of study	7	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Microwave and Antenna Engineering -> Faculty of Electronics Telecommunications and Informatics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Włodzimierz Zieniutycz					
	Teachers	prof. dr hab. inż. Włodzimierz Zieniutycz					
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	30	3.0	42.0	75		
Subject objectives	To provide students the parameters and design solutions of antennas from the point of view of application in wireless communication systems.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W02] knows and understands, to an advanced extent, selected laws of physics and physical phenomena as well as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technical sciences related to the field of study	Student knows and understands propagation phenomena which influence the operation of different wireless systems and explains the operation of some antennas and arrays.			[SW1] Assessment of factual knowledge		
	[K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student simulates the properties of typical antennas i.e. pyramidal horn or microstrip antenna using suitable software. Student designs microstrip antenna using available software.			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		

Subject contents	<p>Course content – lecture</p> <ol style="list-style-type: none"> 1. Introduction, wireless communication systems, frequency bands. 2. Propagation environment, types of the waves. 3. Systems requirements and the antenna parameters 4. Antenna arrays for radar system: horns, waveguide slot antennas. 5. Planar antennas for SSR system: strip and microstrip dipoles. 6. Butler matrices. 7. Antennas for positioning systems: helical, SBF, spiral antennas. 8. Planar antennas and arrays for positioning systems. 9. Base station antennas. 10. Multiband antennas for portable phone. 11. Exposure to RF radiation, SAR. Bioelectromagnetics. 12. Antennas for WiFi system. 13. Planar antennas for RFID. 14. Antennas for UWB. 15. Space antennas. 16. Final test 											
Prerequisites and co-requisites	Fundamentals of antenna theory and particularly the parameters of antennas, RF & microwave technology base.											
Assessment methods and criteria	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 33%;">Subject passing criteria</th> <th style="width: 33%;">Passing threshold</th> <th style="width: 34%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>Practical exercises</td> <td>50.0%</td> <td>35.0%</td> </tr> <tr> <td>Final test</td> <td>50.0%</td> <td>65.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Practical exercises	50.0%	35.0%	Final test	50.0%	65.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Practical exercises	50.0%	35.0%										
Final test	50.0%	65.0%										
Recommended reading	Basic literature	<p>K. Fujimoto, J.R. James: Mobile Antenna Systems Handbook, Artech House, 2001. W. Zieniutycz: Anteny o sterowanej wiązce w technice radarowej WKŁ, 2012. C.A. Balanis: Antenna Theory Analysis and Design, John Wiley and Sons, 1982. A. Kumar: Fixed and Mobile Terminals Antennas, Artech House 1991.</p>										
	Supplementary literature	W. Zieniutycz: Anteny, podstawy polowe, WKŁ, 2000.										
	eResources addresses											
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Discuss the difference between phased arrays and array of a distributed architecture. 2. Discuss the principle of generation of circular polarization in the spiral antenna. 3. Discuss the construction of the antenna SBF (Short Back Fire). 4. Present the evolution from the classical to the PIFA microstrip antenna. 5. Give examples of applications of RFID technology - requirements for the tag antenna. 											
Practical activities within the subject	Not applicable											

Document generated electronically. Does not require a seal or signature.
