

Subject card

Subject name and code	Methods of Reconstruction and Analysis of Images, PG_00068237						
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	October 2026	Academic year of realisation of subject				2028/2029	
Education level	first-cycle studies	Subject group				Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	3	Language of instruction				Polish	
Semester of study	6	ECTS credits				2.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics Telecommunications and Informatics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Artur Poliński					
	Teachers	dr Tomasz Neumann dr inż. Artur Poliński dr inż. Anna Węsierska					
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	30	3.0	17.0	50		
Subject objectives	The aim of the course is to familiarize students with selected issues related to image reconstruction and analysis.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U12] can analyze the operation of components, circuits and systems related to the field of study, as well as measure their parameters and examine technical specifications, and plan and conduct experiments related to the field of study, including computer simulations and measurements, and interpret obtained results and draw conclusions	The student is able to conduct selected computer simulations.			[SU1] Assessment of task fulfilment		
	[K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	The student knows selected methods of image analysis			[SU1] Assessment of task fulfilment		

Subject contents	<p>Course content – lecture Lecture</p> <ol style="list-style-type: none"> <li>1. Forward Problem (FP): Definition and Examples in Medical Imaging</li> <li>2. Reconstruction Quality Metrics in Inverse Problems (IP)</li> <li>3. Existence, Uniqueness, Conditioning, and Stability of Inverse Problems</li> <li>4. Linear Models in Forward and Inverse Problems with Examples. Radon and Fourier Transforms as Linear Operators</li> <li>5. Image Reconstruction Methods in CT Overview</li> <li>6. CT Reconstruction Methods Back Projection (BP)</li> <li>7. The Fourier Slice Theorem</li> <li>8. CT Reconstruction Methods Filtered Back Projection (FBP)</li> <li>9. CT Reconstruction Methods Algebraic Methods</li> <li>10. Statistical Methods of CT Image Reconstruction</li> <li>11. MLEM Algorithm (Maximum Likelihood Expectation Maximization)</li> <li>12. Model-Based CT Image Reconstruction Methods</li> <li>13. CT Image Reconstruction Methods Using Deep Learning Techniques</li> <li>14. Inverse Problem and Image Reconstruction Methods in MRI</li> <li>15. Reconstruction in parallel measurement systems</li> <li>16. Dynamic and activity examinations</li> <li>17. FMRI-reconstruction and properties</li> <li>18. Brain in dynamic MRI and CT</li> <li>19. Parametric images synthesis in brain perfusion evaluation</li> <li>20. Fusion of multimodal images</li> <li>21. Description and analysis of images</li> <li>22. Selected issues in image classification</li> <li>23. Representation of regions and contours</li> <li>24. Parametrization and descriptors, descriptors of geometrical properties</li> <li>25. Parametrization and descriptors, statistical moments</li> <li>26. Parametrization and descriptors, intensity and colour descriptors</li> <li>27. Parametrization and descriptors, texture descriptors</li> <li>28. Feature space reduction</li> <li>29. Application of artificial intelligence in image analysis</li> </ol> <p>Laboratory</p> <ol style="list-style-type: none"> <li>1. Image reconstruction in tomography</li> <li>2. Image segmentation and analysis using mathematical morphology</li> <li>3. Multimodal image overlay</li> <li>4. Parametric image synthesis</li> <li>5. Descriptive description of color, texture and shape</li> </ol>											
Prerequisites and co-requisites												
Assessment methods and criteria	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 33%;">Subject passing criteria</th> <th style="width: 33%;">Passing threshold</th> <th style="width: 34%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>Laboratory</td> <td>51.0%</td> <td>60.0%</td> </tr> <tr> <td>exam</td> <td>51.0%</td> <td>40.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Laboratory	51.0%	60.0%	exam	51.0%	40.0%
