

Subject card

Subject name and code	Introduction to Clinical Analytics, PG_00068101						
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	October 2026	Academic year of realisation of subject				2028/2029	
Education level	first-cycle studies	Subject group				Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	3	Language of instruction				Polish	
Semester of study	6	ECTS credits				3.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Chemistry and Technology of Functional Materials -> Faculty of Chemistry -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Ewa Wagner-Wysiecka					
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		3.0		42.0	75
Subject objectives	The aim of the course is to familiarize the student with the functioning of medical laboratories and the specificity and scope of determinations carried out in them.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U12] can analyze the operation of components, circuits and systems related to the field of study, as well as measure their parameters and examine technical specifications, and plan and conduct experiments related to the field of study, including computer simulations and measurements, and interpret obtained results and draw conclusions	- Student is able to carry out experiments related to the use of clinical analytics in biomedical engineering - Student is able to use and use analytical apparatus used in the determination in the field of biomedical engineering			[SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	[K6_W02] knows and understands, to an advanced extent, selected laws of physics and physical phenomena as well as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technical sciences related to the field of study	- Student knows and understands the principles of the human body - Student knows and understands the specificity of analytical determinations related to clinical analyst - Student understands the role of modern clinical analytics in biomedical engineering			[SW1] Assessment of factual knowledge		

Subject contents	<p>Course content – lecture  <b>Lecture:</b> Clinical analysis and its role in the contemporary medical diagnostics. The specificity of determinations in clinical analysis. Sampling, sample storage and its influence on the correct result of the analysis. Separation methods. Error sources. Spectroscopic methods in clinical analysis UV-Vis spectroscopy, spectrofluorimetry, emission and absorption atomic spectroscopy. Chromatographic methods in clinical analysis (gas chromatography, high performance liquid chromatography). Electrophoresis in clinical analysis. Electroanalytical methods in clinical analysis. Enzymes in clinical analysis. The examples of clinical determinations. The analysis of the metabolic processes water- electrolytes balance. The analysis of the metabolic processes trace elements. Lipids transformations. The drug level monitoring. Automatisation and miniaturization in clinical analysis. The application of clinical analysis methods in pharmaceutical analysis and in pharmaceutical industry. The application of clinical analysis methods in criminology.</p> <p><b>Laboratory:</b> Selected methods for drug determination in body fluids (3h). Analyzers in clinical analytics examples of determinations (4h). Application of routine laboratory tests in clinical determinations (3h). Determination of glucose and ketone bodies in body fluids. Comparison of instrumental methods and commercial strip tests (3h). Field exercises visit to a laboratory (2h).</p>											
Prerequisites and co-requisites	The student has a basic understanding of general, inorganic and organic chemistry, as well as of qualitative and quantitative analysis of chemical compounds. The student is familiar with basic laboratory techniques and is able to interpret the results of chemical determinations.											
Assessment methods and criteria	<table border="1" data-bbox="448 620 1487 770"> <thead> <tr> <th data-bbox="448 620 798 658">Subject passing criteria</th> <th data-bbox="802 620 1142 658">Passing threshold</th> <th data-bbox="1147 620 1487 658">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 665 798 689">Written exam</td> <td data-bbox="802 665 1142 689">51.0%</td> <td data-bbox="1147 665 1487 689">50.0%</td> </tr> <tr> <td data-bbox="448 696 798 770">Completion of all laboratory sessions, submission of reports, and passing of short written tests.</td> <td data-bbox="802 696 1142 770">51.0%</td> <td data-bbox="1147 696 1487 770">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Written exam	51.0%	50.0%	Completion of all laboratory sessions, submission of reports, and passing of short written tests.	51.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Written exam	51.0%	50.0%										
Completion of all laboratory sessions, submission of reports, and passing of short written tests.	51.0%	50.0%
