

Subject card

Subject name and code	Solar energy conversion, PG_00020840						
Field of study	Technical Physics						
Date of commencement of studies	February 2027	Academic year of realisation of subject			2026/2027		
Education level	second-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Division of Molecular Photophysics -> Institute of Physics and Applied Computer Science -> Faculty of Applied Physics and Mathematics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Piotr Grygiel				
	Teachers		dr inż. Piotr Grygiel				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	15.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		4.0		26.0	75
Subject objectives	Consolidating and expanding knowledge of methods and techniques for converting solar radiation energy into other types of useful energy. Presenting the theoretical description of photovoltaic, photochemical and photothermal conversion, as well as current practical solutions using these methods.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		

Subject contents	<p>Course content – lecture Solar radiation - the origin, composition, quantitative description, impact the Earth's atmosphere, the declination of the Sun, the solar time, hour angles, azimuths of sunrise and sunset, the correlation between the sums of solar radiation, solar radiation on a plane inclined to the horizontal, sum of daily radiation. Photovoltaic conversion- theoretical basis, trapping of light in solar cells, solar concentrators, concepts for improving the efficiency of solar cells, the current status and prospects of development of photovoltaic energetics. Photochemical conversion- theoretical basis, methods of using solar radiation to hydrogen production. Photothermal conversion -selective absorber coating of solar panels, transparent cover, antireflection coatings, thermal insulation materials, working fluids with low freezing point, the penetration of solar radiation through the transparent cover collectors, flat liquid collectors, useful thermal power, heat transfer coefficient, heat loss, solar systems for water heating, thermosyphon system, heat storage, water tanks, heat storage using phase transitions. The basis of hybrid PVT system operation.</p> <p>Seminar :generalized Plancks law, solar radiation, concentration of solar radiation, photoelectrochemical water splitting, photovoltaic hydrogen generation, photovoltaic effect in biological systems, calculating the angle of incidence of the direct component of solar radiation on the surface of the collector, method of calculating the transmissivity of the collector cover, transmission-absorption coefficient, flat liquid collector in the transient state, the parameters of flat plate collectors and their determination, optimal angle of the flat plate collector, solar systems, analysis of the collector battery, air collector Trombe's, the operation of a water tank with water completely mixed and with thermal stratification, the principle of operation, characteristics, problems of design and operation of vacuum collectors.</p> <hr/> <p>Course content – seminar Generalized Plancks law, solar radiation, concentration of solar radiation, photoelectrochemical water splitting, photovoltaic hydrogen generation, photovoltaic effect in biological systems, calculating the angle of incidence of the direct component of solar radiation on the surface of the collector, method of calculating the transmissivity of the collector cover, transmission-absorption coefficient, flat liquid collector in the transient state, the parameters of flat plate collectors and their determination, optimal angle of the flat plate collector, solar systems, analysis of the collector battery, air collector Trombe's, the operation of a water tank with water completely mixed and with thermal stratification, the principle of operation, characteristics, problems of design and operation of vacuum collectors. PVT systems.</p> <p>It is possible to prepare a presentation on a topic of your choice, after consulting with the course instructor.</p>											
Prerequisites and co-requisites												
Assessment methods and criteria	<table border="1" data-bbox="450 1088 1489 1223"> <thead> <tr> <th data-bbox="450 1088 794 1126">Subject passing criteria</th> <th data-bbox="794 1088 1139 1126">Passing threshold</th> <th data-bbox="1139 1088 1489 1126">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="450 1126 794 1182">seminar: oral presentation with preparation of a presentation</td> <td data-bbox="794 1126 1139 1182">50.0%</td> <td data-bbox="1139 1126 1489 1182">50.0%</td> </tr> <tr> <td data-bbox="450 1182 794 1223">lecture: final examination</td> <td data-bbox="794 1182 1139 1223">50.0%</td> <td data-bbox="1139 1182 1489 1223">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	seminar: oral presentation with preparation of a presentation	50.0%	50.0%	lecture: final examination	50.0%	50.0%
