

Subject card

Subject name and code	Basics of Chemical Metrology, PG_00060882						
Field of study	Chemical Technology						
Date of commencement of studies	October 2026	Academic year of realisation of subject				2028/2029	
Education level	first-cycle studies	Subject group				Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	3	Language of instruction				Polish	
Semester of study	5	ECTS credits				3.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department of Analytical Chemistry -> Faculty of Chemistry -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Piotr Konieczka				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	30	5.0		40.0		75
Subject objectives	Learning about useful mathematical statistics, methods of processing measurement results, familiarisation with the problem of estimating measurement uncertainty including creating an uncertainty budget, characteristics of the analytical method, determining validation parameters.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W02] Possesses the chemical knowledge necessary to synthesize, analyze and evaluate the properties of compounds and processes used in chemical technology.	possesses a sound knowledge of chemistry, enabling them to independently carry out syntheses, analyse and evaluate the properties of compounds and processes used in chemical engineering, and interpret the results obtained in the context of engineering practice.			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K6_K02] is aware of the responsibility for his/her work and is ready to work in a team and share responsibility for common tasks.	carries out their tasks in the field of chemical metrology with due care, ensuring the reliability and accuracy of measurements; they actively collaborate within the team, sharing responsibility for joint experiments and projects and supporting other group members in achieving common goals.			[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice		
	[K6_U06] Recognizes the relationships between technological issues and their impact on the environment, taking into account the principles of sustainable development, systemic and non-technical aspects, and occupational health and safety principles	analyses the impact of technological processes on the natural environment, taking into account the principles of sustainable development, systemic and social aspects, and identifies potential risks, applying appropriate health and safety procedures in engineering practice.			[SU2] Assessment of ability to analyse information [SU5] Assessment of ability to present the results of task		
Subject contents	<p>Course content – lecture Fundamentals of mathematical statistics; statistical parameters and basic statistical tests; creating an uncertainty budget and estimating measurement uncertainty; validation parameters methods of determination, calculation and verification. The course will be completed with a final examination.</p> <p>Course content – laboratory Calculations using Excel spreadsheets related to the practical implementation of the lecture topics.</p>						

Prerequisites and co-requisites	<p>Students should have basic knowledge of general and analytical chemistry (concepts of solution concentration, chemical reactions, basic techniques of quantitative and qualitative analysis). Know the basics of mathematics and statistics (operations on real and exponential numbers, basic statistical concepts). Be able to read and interpret numerical data and graphs.</p> <p>In addition, they should have completed courses in physical chemistry or instrumental analysis, which will help them understand concepts related to accuracy, sensitivity and calibration of measuring equipment. They should be able to use data analysis software, such as Excel or Origin, or have a basic knowledge of programming (e.g. Python, R) especially for statistical analysis of measurement data.</p>											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="448 396 794 432">Subject passing criteria</th> <th data-bbox="794 396 1141 432">Passing threshold</th> <th data-bbox="1141 396 1487 432">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 432 794 465">active participation in lectures</td> <td data-bbox="794 432 1141 465">60.0%</td> <td data-bbox="1141 432 1487 465">50.0%</td> </tr> <tr> <td data-bbox="448 465 794 501">lab reports</td> <td data-bbox="794 465 1141 501">60.0%</td> <td data-bbox="1141 465 1487 501">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	active participation in lectures	60.0%	50.0%	lab reports	60.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
active participation in lectures	60.0%	50.0%										
lab reports	60.0%	50.0%
