| Subject objectives                          | The aim of the course <i>Environmental Pollution Analytics</i> is to familiarize students with the fundamentals and modern methods of analyzing pollutants resulting from human activity, with particular emphasis on waste and its impact on the environment. Students will learn about the classification and characteristics of different types of waste, as well as the principles of sampling and preparing environmental samples for laboratory analysis. Both classical methods of pollution analysis and modern chromatographic and spectroscopic techniques will be discussed, including their use in the determination of heavy metals, microplastic particles, and gaseous pollutants. Special attention will be paid to air monitoring methods, the assessment of emissions from waste, as well as new trends in environmental analytics related to waste management and the possibilities of utilizing waste for energy recovery. |                                                          |                                         |                                     |                   |            |     |
|                                             | The course aims to develop the ability to practically apply analytical methods in environmental studies, interpret results, and assess the impact of pollutants on the environment and human health. It also builds awareness of modern, eco-friendly, and sustainable solutions in waste management.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                          |                                         |                                     |                   |            |     |

| Learning outcomes | Course outcome                                                                                                                                                                                                                                                                                | Subject outcome                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Method of verification                                                                                                                                                                            |

|                   | [K6_W04] demonstrates knowledge and understanding of research methods (information acquisition, simulations, experimental methods) in the field of technologies related to the recovery of raw materials and energy.                                                                          | <p>The student demonstrates knowledge and understanding of research methods, including information gathering, simulations, and experimental techniques, in the field of technologies related to raw material and energy recovery.</p> <p>The student is able to evaluate the practical application of these methods and their usefulness for analyzing and solving technological problems.</p>                                                                                                                                                  | <p>[SW1] Assessment of factual knowledge</p> <p>[SW2] Assessment of knowledge contained in presentation</p> <p>[SW3] Assessment of knowledge contained in written work and projects</p>           |
|                   | [K6_U02] solves engineering issues and problems in the area of raw materials and energy recovery through the use of appropriate analytical, numerical and experimental tools and methods.                                                                                                     | The student is able to apply classical and modern analytical methods (chromatographic, spectroscopic, biological) to identify and quantify pollutants in waste and the environment, and subsequently use the obtained results to assess the potential for resource and energy recovery while minimizing the negative impact on the environment.                                                                                                                                                                                                 | <p>[SU2] Assessment of ability to analyse information</p> <p>[SU3] Assessment of ability to use knowledge gained from the subject</p> <p>[SU4] Assessment of ability to use methods and tools</p> |
|                   | [K6_W02] analyzes engineering and technological issues and problems in the area of raw materials and energy recovery using appropriate and appropriate analytical, numerical and experimental tools and methods                                                                               | <p>The student is able to analyze engineering and technological issues related to raw material and energy recovery, using appropriate analytical, numerical, and experimental tools and methods.</p> <p>The student is capable of practically applying these methods to solve specific technological problems, assess process efficiency, and interpret the obtained results.</p>                                                                                                                                                               | <p>[SW1] Assessment of factual knowledge</p> <p>[SW3] Assessment of knowledge contained in written work and projects</p>                                                                          |
|                   | [K6_U04] formulates research problems and selects appropriate research methods (information acquisition, simulations, experimental methods) in the field of technologies related to the recovery of raw materials and energy in order to solve specific tasks and to report research results. | <p>The student is able to independently formulate research problems related to environmental pollution and waste management, and to select appropriate research methods, including information gathering, simulations, and experimental techniques, in the field of raw material and energy recovery.</p> <p>The student is capable of practically applying selected methods to solve specific research tasks, conduct environmental analyses, and report and interpret research results in a reliable and scientifically justified manner.</p> | <p>[SU1] Assessment of task fulfilment</p> <p>[SU2] Assessment of ability to analyse information</p>                                                                                              |

**Lecture Topics****1. Introduction to Environmental Analytics**

- importance and scope of environmental analytics,
- basic concepts and legal acts,
- the role of analytics in environmental monitoring and waste management.

**2. Types of Waste and Their Classification**

- municipal, industrial, hazardous, and medical waste,
- waste classification criteria and waste codes.

**3. Sampling and Preparation of Environmental Samples**

- techniques for sampling soil, water, air, and waste,
- avoiding analytical errors, representativeness of samples,
- sample preparation methods (drying, homogenization, extraction, mineralization).

**4. Classical Methods of Pollution Analysis**

- titration, gravimetry, UV-VIS spectrophotometry,
- applications and limitations of classical methods,
- examples of simple pollutant analysis.

**5. Chromatographic Methods in Environmental Analytics**

- gas chromatography (GC) and liquid chromatography (HPLC),
- detectors used in the analysis of organic pollutants,
- examples of pesticide and polycyclic aromatic hydrocarbon (PAH) analysis,
- miniaturization and new trends in chromatography.

**6. Heavy Metal Analysis Using Spectroscopic Techniques**

- heavy metals as environmental and health hazards,
- atomic absorption spectrometry (AAS),

- ICP-OES, ICP-MS applications and method comparison,
- examples of soil, wastewater, and waste analysis.

#### 7. Analysis of Microplastic Particles

- sources and characteristics of microplastics,
- separation and sample preparation techniques,
- FTIR and Raman spectroscopy in microplastic identification,
- environmental and health consequences of microplastic presence.

#### 8. Monitoring and Analysis of Air and Emissions from Waste

- emission sources from waste combustion and landfilling,
- monitoring of particulate matter (PM10, PM2.5),
- methods for determining volatile organic compounds (VOCs),
- air quality monitoring systems and their applications.

#### 9. New Trends in Environmental Analytics and Waste Management

- biosensors and biological methods in pollution assessment,
- rapid field methods (portable devices),
- circular economy approaches.

#### 10. Waste and Energy Recovery

- energy recovery from organic waste (biogas, fermentation),
- environmental and analytical aspects of energy processes,
- evaluation of efficiency and impact on emission reduction.

#### Topics of laboratory and field exercises:

1. **Air quality assessment in high-risk areas** practical methods for monitoring air pollutants in locations of elevated environmental and health risk.
2. **Odour nuisance evaluation using field olfactometry** application of sensory techniques to assess the intensity and nuisance of odours in the environment.
3. **Assessment of surface water quality using rapid colorimetric tests** application of simple colorimetric methods to determine selected physicochemical parameters of water.

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                               |                                                                                                                   |                      |       |          |       |       |              |       |       |
