

Subject card

Subject name and code	, PG_00069243						
Field of study	Civil Engineering						
Date of commencement of studies	October 2023		Academic year of realisation of subject		2026/2027		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	4		Language of instruction		Polish		
Semester of study	7		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Geotechnical and Hydraulic Engineering -> Faculty of Civil and Environmental Engineering -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Paweł Więclawski				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	To provide students with knowledge and practical skills related to the application of the BIM (Building Information Modeling) methodology in the design, analysis, and implementation of geotechnical and hydrotechnical projects, with particular emphasis on the integration of physical models, analytical models, and field data.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_K01] Is aware of the key aspects of professional, ethical and social responsibility related to management, business operation, decision making and opinion formulation in civil engineering.	The student is prepared to independently make design decisions and evaluate their consequences in social, environmental, and technical contexts.	[SK1] Assessment of group work skills [SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness [SK5] Assessment of ability to solve problems that arise in practice
	[K6_W07] Understand the investment's impact on the environment and the interrelationships and dependencies between the building structure and the natural environment	The student understands the purpose of introducing the BIM system into the design process. They understand the financial, technical, and environmental aspects, as well as the application of optimization in the design of geotechnical and hydrotechnical structures.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
	[K6_W06] Demonstrates practical knowledge and understanding of materials, devices and tools, processes and technologies in the field of civil engineering (and their limitations).	The student models an engineering structure by selecting appropriate construction materials depending on the execution technology. If necessary, the student is able to define a new construction material and assign it the required physical and strength parameters.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation
	[K6_U07] Design and build engineering structures in a sustainable manner, with care for the natural environment and a minimum carbon footprint	The student is able to independently create a physical model of any geotechnical or hydrotechnical structure in Autodesk Revit. They can use it to develop an analytical model and perform numerical analysis.	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	[K6_U06] Conduct engineering activities in civil engineering subject area, using and applying practical knowledge and understanding of materials, equipment and tools, processes and technologies.	The student is able to present the workflow in the design process of a selected geotechnical or hydrotechnical structure, indicating both simple and complex issues that require simplifications and explaining their impact on the analysis results.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
Subject contents	Course content – laboratory 1. REVIT STRUCTURE BASIC TOPICS: interface; axes and levels; columns, beams, walls, slabs; foundations slab, footing, strip footing; reinforcement. 2. REVIT STRUCTURE CONCRETE STRUCTURE (bridge pier/reservoir/quay/etc.). 3. REVIT STRUCTURE STEEL STRUCTURE (piling/seawall/pier/etc.). 4. ROBOT STRUCTURAL ANALYSIS (RSA): export of the model from Revit to RSA; analysis in RSA. 5. CIVIL 3D: Ground profiles in Geotechnical Modeler.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Joint projects	55.0%	30.0%
	Individual project	55.0%	70.0%

	eResources addresses	
Example issues/ example questions/ tasks being completed	1. Create a physical model of a raft-and-pile foundation for a bulk material storage tank located on a port quay. 2. Create an analytical model and perform foundation calculations for a bridge pier on precast reinforced concrete piles. 3. Create a geotechnical profile based on source files using the Geotechnical Modeler module.	
Practical activities within the subject	Not applicable
