

Subject card

Subject name and code	Hydraulics & hydrology, PG_00062076						
Field of study	Civil Engineering						
Date of commencement of studies	October 2025		Academic year of realisation of subject		2026/2027		
Education level	first-cycle studies		Subject group				
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Geotechnical and Hydraulic Engineering -> Faculty of Civil and Environmental Engineering -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Michał Szydlowski				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	10.0	5.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	Acquisition of knowledge and skills related to the description of the liquid state and hydrological processes.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U01] Apply knowledge and understanding of mathematics as well as sciences and engineering disciplines underlying civil engineering to solve engineering problems and issues.		The student calculates the basic parameters of water flow in pipelines, channels and hydraulic devices. It measures and determines the parameters of water movement. He pulls it out conclusions about water movement.		[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
	[K6_U02] Analyse & solve engineering issues & problems in the field of civil engineering by applying appropriate and relevant established analytical, numerical and experimental methods.		The student solves hydraulic problems and tasks in the field of flows in pipelines, open channels and in the ground, related to civil engineering.		[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	[K6_W02] Demonstrate knowledge and understanding of the processes and established methods of analysis / solution of engineering issues & problems in the field of civil engineering and of their limitations.		The student determines and analyzes the elements of the water balance of a river catchment. The student names and explains the physical processes that determine the circulation of water on the surface and in the ground. The student defines concepts and explains the principles of water movement in the natural environment. It determines the nature of water flow in closed conduits and open channels. Analyzes simplified flow models.		[SW1] Assessment of factual knowledge		
	[K6_U05] Conducts research (obtaining information, simulations, experimental methods) in the field of construction in order to solve specific tasks and report research results.		The student carries out hydraulic experiments in the field of flows in pipelines, open channels and in the ground, related to civil engineering.		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools		

Subject contents	Course content – lecture LECTURE Fluid properties. The forces acting on the fluid. Basic equations of fluid flow. Classification of flows. Elements of hydrostatics. Kinematics of fluids. Simplify the equations of water flow. Conservation equations for one-dimensional flow. The fluid flow in closed pipes. The fluid flow in open channels. Flow of liquid through the wires. Filtration of water in the soil. Velocity and flow measurements. Hydrological cycle, hydrological characteristics of catchments. The parameters of the river basin. Water balance of the catchment. Flood, flow characteristics in rivers. CLASSES Hydraulics and hydrology computations: hydrostatics, pipelines, open channels, water filtration LABORATORY EXERCISES Analysis of flow in pipelines. Analysis of flow in open channel. Analysis of flow in ground.		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory experiments reports	100.0%	25.0%
	Midterm colloquium	50.0%	25.0%
	Final test	60.0%	50.0%

	eResources addresses		
Example issues/ example questions/ tasks being completed	1. Computations of hydrostatic pressure and pressure forces. 2. Computations of pressure flow in pipelines. 3. Compuations of open channel hydraulics. 4. Hydrological computations of river catchment outflow. 5. Measurments of water flow in open channels.		
Practical activites within the subject	Not applicable
