GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Spectroscopic methods in the analysis of chemical industry products, PG_00066134		
Field of study	Engineering and Technologies of Energy Carriers		
Date of commencement of studies	February 2027	Academic year of realisation of subject	2026/2027
Education level	second-cycle studies	Subject group	Obligatory subject group in the field of study Subject group related to practical vocational preparation
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	1	ECTS credits	2.0
Learning profile	practical profile	Assessment form	assessment
Conducting unit	Department of Organic Chemistry -> Faculty of Chemistry -> Faculties of Gdańsk University of Technology		
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. Sławomir Makowiec	
	Teachers		

Lesson types

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	0.0	0.0	0.0	0.0	40.0	40

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	40	5.0	5.0	50

Subject objectives

A main goal is to teach students basic spectroscopic methods including: NMR, IR, UV, and MS, and their application in the analysis of the structure of organic compounds

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_W05] recognizes and describes phenomena in the field of physics and chemistry, including elements of chemical engineering necessary to predict the course of a technological process.	The student knows the physical basis of IR, NMR and MS spectroscopy.	[SW1] Assessment of factual knowledge
[K7_W07] selects analytical techniques appropriate for solving specific technological tasks in a production plant	The student knows which spectroscopic method to use depending on the analytical problem, type of compounds or other conditions relating to the sample.	[SW1] Assessment of factual knowledge
[K7_U01] is integrates and interprets information from literature, databases and other sources	The student is able to assign the appropriate structural formula to a compound, including the presence of functional groups, based on IR, NMR and MS spectra.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information

Subject contents	Course content – seminar Principles of spectroscopy electromagnetic radiation, energy levels in molecules, absorption of radiation, line shape, selection rules, application of the Fourier transformation in spectroscopy. NMR magnetic properties of atomic nuclei, the chemical shift, the spin-spin coupling, diamagnetic anisotropy of molecules, interpretation of the proton NMR spectra, spin systems, two-dimensional spectra (2D-NMR), basics of ^{19}F and ^{13}C NMR. Infrared spectroscopy (IR) harmonic and anharmonic oscillator, vibrations of multiatom molecules, the normal vibrations, transition probability, group frequencies, measurements of the IR spectra, interpretation of the IR spectra, hydrogen bonds in the IR spectroscopy. Mass spectroscopy (MS) physical basis of the MS spectroscopy, methods of sample ionization, ion types in MS, determination of molecular mass and molecular formula, fragmentation of molecules.
Prerequisites and co-requisites	1. Knowledge of theoretical basis of spectroscopy 2. Knowledge of structures of organic compounds 3. Knowledge of nomenclature of organic compounds

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Four tests during semester	60.0%	100.0%
