| Subject objectives                          | The aim of the course is to learn the characteristics of different types of wastewater depending on their origin (industrial sector) as well as introduce the commonly used technologies for removing pollutants from wastewater and get to know an alternative methods. Another goal is to understand the problems of management of sewage sludge generated in municipal wastewater treatment plants and industrial plants. |                                                          |                                                                                                                                                                                                                 |                                     |                                                                                                                                                                   |            |     |

| Subject contents                                               | Course content – lecture                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                  |                               |
|                                                                | Characteristics of municipal and industrial wastewater depending on the origin. Wastewater treatment: basic physical and physicochemical processes (sedimentation, flotation, extraction, coagulation, adsorption, dialysis, reverse osmosis, ion exchange), chemical processes (neutralization, precipitation, chlorination, reduction, oxidation), and biological processes (aerobic biodegradation, acid fermentation, methane fermentation). Electrochemical oxidation in wastewater treatment. Modern solutions for industrial waste treatment and biological removal of biogenic impurities. Selection of wastewater treatment technology for selected examples of wastewater from food, chemical and engineering industry. Characteristics and treatment of leachate from municipal landfills and wastewater resulting from the remediation of oily soil. Characteristics of the sludge from different stages of sewage treatment (grit and sludge from primary settling tanks, excessive biological sludge). Sewage sludge processing technologies: methods for thickening and dewatering of sewage sludge (lagoons, reed beds, belt-filter presses, conditioning by polyelectrolytes), biological, thermal and chemical stabilization (mechanism and technology). Autothermal, thermophilic, aerobic sludge hygienisation. Sanitation and fermentation of sewage sludge. Thermal processing for sewage sludge management, combustion. Requirements for the safe storage of sewage sludge. Fertilizing properties of sludge from municipal sewage treatment plants and their processing into mineral-organic fertilizer. Agriculture utilization of sewage sludge (composting, reed beds, vermicultures). Use of sewage for remediation of degraded areas and industrial waste disposal (eg. lime after flotation). The recovery of phosphorus from sewage sludge. The most common problems associated with wastewater treatment and serious failures. |                                                                                                                                                                                                                                                  |                               |
|                                                                | Course content – laboratory                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                  |                               |
|                                                                | Mechanical wastewater treatment – characteristics of treatment processes and assessment of their efficiency. Biological wastewater treatment – use of biological processes for pollutant removal and assessment of treatment efficiency. Wastewater sludge dewatering – dewatering methods, assessment of process efficiency, and possibilities for further sludge management. Anaerobic digestion of wastewater sludge – principles of the process, operating conditions, biogas production, and possibilities for its utilization.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                  |                               |

Transformation of nitrogen compounds - reactions.<br>Characterize the wastewaters from the selected industries (petrochemical, galvanization, food etc.) and prepare a technological scheme of sewage treatment. What types of contaminants are removed at various stages?<br>What are the principals of wastewater treatment in case of sewage containing emulsified oils?<br>What is the purpose and what are the parameters of the thermal sewage sludge treatment?<br>What is the purpose of sludge conditioning and what methods are designed for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                  |                               |
