

Subject card

Subject name and code	Lipidomics and glycomics, PG_00070036						
Field of study	InfoBioChem						
Date of commencement of studies	February 2027		Academic year of realisation of subject		2026/2027		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Analytical Chemistry -> Faculty of Chemistry -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Agata Kot-Wasik				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	45.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		10.0	75
Subject objectives	The course "Lipidomics and Glycomics" aims to introduce students to the theoretical and practical aspects of studying lipids and glycans, as well as modern analytical techniques in these fields. Students gain knowledge of the biology of lipids and glycans, including phospholipids, sphingolipids, triacylglycerols, N- and O-glycans, glycosaminoglycans, and gangliosides. The course covers the basics of liquid chromatography, mass spectrometry, extraction methods, and practical aspects of LC-MS analysis, including identification, quantification, and MS/MS spectrum interpretation. Students learn to design lipidomic and glycomic studies, prepare and analyze data using chemometric and statistical methods, work with databases, and integrate omics data, enabling comprehensive interpretation of results and assessment of the biological significance of lipids and glycans.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W02] has in-depth knowledge of omics science, including the principles of generating, analyzing, and interpreting omics data.	The student has advanced knowledge in omics sciences, understands the principles of generating, analyzing, and interpreting omics data, can use modern bioinformatics and chemometric tools, and collaborate effectively in a team when analyzing data, sharing knowledge and results efficiently.	[SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
	[K7_K02] is ready to work in a team, taking on various roles depending on the needs of the task.	The student can collaborate effectively in a team during lipidomic and glycomic studies, performing different roles as required, participating in sample preparation, LC-MS analysis, MS/MS interpretation, chemometric and statistical analysis, and working with databases.	[SK1] Assessment of group work skills [SK3] Assessment of ability to organize work
	[K7_U02] is able to use IT tools for operations on nucleotide and protein sequences.	The student can use computational tools to perform operations on nucleotide and protein sequences, including homology searches, sequence comparisons, and basic data analysis, and collaborate effectively in a team when analyzing sequences.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject
	[K7_K01] is ready to determine the priorities of activities in the implementation of his/her own tasks or those assigned by others	The student can plan and conduct lipidomic and glycomic studies, including sample preparation, LC-MS analysis, MS/MS interpretation, and chemometric and statistical data analysis, use databases, and set priorities in individual and team work.	[SK2] Assessment of progress of work

Subject contents	<p>Course content – lecture</p> <p>Introduction to the course, lipidomics and glycomics; biology of lipids and glycans; basics of liquid chromatography and mass spectrometry; extraction methods; LC-MS quantitative analysis; MS/MS interpretation; study design; data preparation, chemometric and statistical analysis; omics data integration; applications and results interpretation.</p> <p>Lecture:</p> <ol style="list-style-type: none"> 1. Introduction to the course and to lipidomics and glycomics (WHB) 2. Biology of lipids and glycans (phospholipids, sphingolipids, triacylglycerols, N- and O-glycans, glycosaminoglycans, gangliosides) (WHB) 3. Basics of liquid chromatography 1 (AKW) 4. Basics of liquid chromatography 2 (AKW) 5. Basics of mass spectrometry 1 (AKW) 6. Basics of mass spectrometry 2 (AKW) 7. Methods for lipid and glycan extraction comparison, protocols (AKW) 8. LC-MS in lipidomics and glycomics practical aspects, quantitative analysis (WHB) 9. MS/MS fragmentation how to interpret fragment spectra? Identification of lipids and glycans (WHB) 10. Practical aspects of designing a lipidomic/glycomomic study (WHB) 11. Introduction to lipidomic/glycomomic data analysis: data preparation 1 (WHB) 12. Introduction to lipidomic/glycomomic data analysis: data preparation 2 (TM) 13. Chemometric and statistical analysis (TM) 14. Omics data integration lipidomics + glycomics (TM) 15. Lipidomics and glycomics applications / interpretation of results <hr/> <p>Course content – project</p> <p>Project introduction and planning; homogenization and extraction of lipids and glycans; LC-MS and data interpretation; data preparation extraction, normalization, filtering, quantitative analysis; lipid/glycan identification HMDB, LIPIDMAPS; quality control and introduction to MetaboAnalyst; statistical and chemometric analysis; data integration and visualization; working on selected datasets and preparing presentations; project presentations.</p> <p>Project:</p> <ol style="list-style-type: none"> 1. Introduction to the project, literature review, planning, data selection (WHB) 2. Homogenization and extraction of lipids and glycans from brain tissue (AKW/MM)
------------------	--

	<p>3. LC-MS analysis of lipids interpretation of MS, MS/MS spectra, chromatograms (WHB/MM)</p> <p>4. Data preparation 1 extraction of chemical entities (WHB)</p> <p>5. Data preparation 2 normalization, filtering (WHB)</p> <p>6. Lipid/glycan identification HMDB, LIPIDMAPS (WHB)</p> <p>7. Data preparation 3 quantitative analysis (WHB)</p> <p>8. Data quality control and introduction to MetaboAnalyst RSD, PCA (WHB)</p> <p>9. Statistical and chemometric analysis 1 (TM)</p> <p>10. Statistical and chemometric analysis 2 (TM)</p> <p>11. Data integration and visualization metabolic pathways, KEGG, LIPIDMAPS, heatmaps, PCA (WHB)</p> <p>12. Working on selected datasets 1 results processing, preparation of presentation (WHB)</p> <p>13. Working on selected datasets 2 results processing, preparation of presentation (TM)</p> <p>14. Working on selected datasets 3 results processing, preparation of presentation (WHB)</p> <p>15. Project presentations (WHB)</p>		
Prerequisites and co-requisites	Basic knowledge of analytical chemistry, instrumental analysis, organic chemistry, and statistical analysis.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	60.0%	40.0%
	Project report + presentation (project)	60.0%	60.0%
